Dear Customer:

Our Catalog has changed this year. We hope you like it as much as we do. Its new style is significant of the progress found in other areas of the nursery and business world. You will find listed in this catalog the best of the old varieties, most popular ones, and many new items that, in a few years, may become the standards of the industry.

Thank you for your past orders. We hope your experience with our plants has been pleasant. Our nursery stock, this year, is some of the best we have ever grown. Good plants from good nurserymen are the foundation of good orchards and gardens. Because we know our plants are some of the best anywhere, we guarantee them. Be sure of satisfaction. Join our long list of happy customers this year.

Our 3-Point Guarantee

1. ALL STOCK GUARANTEED TO ARRIVE IN A-1 CONDITION. All Truck Freight, Express and Parcel Post shipments are insured. Notify us and the carrier at once of damage and claims will be filed for losses. Duplicate orders for damaged stock will be shipped at once.

2. ALL STOCK GUARANTEED TRUE-TO-NAME. Every precaution is taken to insure truthness-to-name. Any plants proving not so will be replaced at no charge or purchase price refunded. Further than this we are not responsible.

3. ALL STOCK IS GUARANTEED TO START TO GROW, providing our planting instructions are followed and normal care is given. Should any plant fail to do this, notify us direct by July 1st and replacements will be sent the following season without charge. After this date, we will replace unsatisfactory plants at one-half purchase price. You pay transportation on all replacements. This guarantee covers all normal losses. Heavy and unusual losses due to conditions beyond our control will be settled satisfactorily with the customer.

REDWIN

U. S. Plant Patent No. 1661

"Win With Redwin"

Redwin is growing up. Now seven years old, it is making a place for itself in many orchards over the country. When first introduced, we thought Redwin would be a fine and profitable variety for heavy commercial planting. Unfortunately, this was not the case. Redwin is, however, an excellent variety for local markets and roadstand use. Growers everywhere are finding that Redwin is their best bet to start the very early peach season.

Fruits of Redwin are of good size, high color, and fine quality. They require heavy thinning and early spraying for best results. Redwin is a white-fleshed semicling that colors with a fine red blush well before picking time. Flavor is excellent for such an early peach and is much like its parent, Erly-Red-Fre. Redwin should be picked when firm ripe in order to hold or carry well. Close attention should be paid to this variety as ripening time approaches in order to avoid over-ripe fruit. Just think, Redwin needs only 60 short days from bloom to picking.

Trees of Redwin are vigorous and thrifty growers. They are hardy in wood and bud, early bearers, and heavy producers. Since the fruits ripen so early, only maintenance spraying is needed the rest of the season. Redwin needs good, sensible orchard management to be profitable—nothing more. Include Redwin in your plans this year.

Redwin Prices on Page 5

Pictures of mature Redwin (center), Cardinal (left) and Dixired (right), showing comparative size and season of ripening.

SUNSHINE

(U. S. Plant Patent No. 2360)

We have a nice supply of dormant budded, 1-yr. trees of **SUNSHINE** for this planting season. Prices are same as for Dawne and Redwin . . . See page 5.

SUNSHINE is a brilliant new budsport of Redhaven. It ripens five or more days earlier than Redhaven and exhibits the same fine color characteristics of its parent.

The flesh is a clear yellow sparsely flecked with red streaks, is melting, of good flavor and resists browning. Sunshine is a **TRUE FREESTONE**, even when hard ripe, making it far superior to Redhaven in this respect. Fruit size is equal to, or larger than, that of Redhaven on trees of comparable age.

Trees of Sunshine are vigorous, somewhat resistant to disease, upright in growth, and begin bearing at an early age with heavy crops. Buds and wood seem to be equally as hardy as the parent. Hours of chilling needed to break dormancy are about the same as Redhaven.

SUNSHINE originated in the orchard of John Errera, Hammondtown, N. J., as a budsport of a Redhaven tree. The first fruit was so much earlier and of such outstanding beauty that Mr. Errera was attracted to it. He brought it to our attention, and after thorough testing, we have found Sunshine worthy of introduction to the public. We are sure that you will want to try some trees of this fine new variety this year.

DAWNE

U. S. Plant Patent 1955

THE WORLD'S EARLIEST YELLOW FREESTONE PEACH

This is a picture of ripe Dawne peaches. Note the good size and shape. Picture is $\frac{2}{3}$ actual size.

FACTS ABOUT DAWNE

COLOR—Dawne has that beautiful red blush that almost completely covers a golden yellow ground color. This fine color comes about 10 days before the fruits are ripe, allowing picking in time for distant markets.

SIZE—Dawne sizes up well on older trees. The tree loads up to such an extent that thinning is a necessity almost every year. The fruits of well grown Dawne will pack $2\frac{1}{4}$ inches up in any normal year.

ORIGIN—Dawne originated in Carbon County, Pa., as a chance seedling at the home of Mr. J. R. Stettler. It was so early and of such good size and flavor that Mr. Stettler was attracted to it. After testing it for several years we believe that it is truly valuable to the fruit industry and we are pleased to introduce it to our customers.

FLAVOR—The flavor of Dawne is the most outstanding and pleasing of any early peach that we have ever tasted. It is sweet, sub-acid, melting and juicy. Dawne is equally good when eaten from the tree, sliced with sugar, canned, frozen, or used in ice cream.

VIGOR—The trees of Dawne are vigorous, upright to spreading in growth. The buds and wood are hardy to severe winter temperature and spring frosts.

BEARING AGE—Dawne bears early, having fruits the second year after planting. Good crops have nearly always been recorded in the third year. The blossoms are showy, self-fertile, and hardy.

TIME OF RIPENING—Dawne ripens about 10 days after Redwin and 8 to 10 days before Erly-Red-Fre. This is well in advance of its nearest competitor and at a time when extra high color and quality will bring the most money.

NOTE: Ripening order of varieties designated by bracketed numbers after name. Varieties overlapping in ripening season indicated by sub-letter. Example: Elberta and Hale are about same season and are designated by numbers 12b and 12c.

MARCUS (1) A new introduction from North Carolina which ripens about with Mayflower and Redwin. It is yellow fleshed, clingstone, with a yellow skin blushed red on one side. Shipping quality seems fair and it should be tried throughout the Southern areas. Marcus is a seedling of Erly-Red-Fre.

REDWIN (1a) See page 4 for full description & page 5 for prices.

DAWNE (2) See page 5 for full description. Also see front cover for color illustration.

EARLRIED (2a) A cross of Redhaven made at Beltsville, Md. that ripens 2 to 5 days earlier than Cardinal and completes harvest before Sunhaven. Fruits are medium sized, with very light pubescence, and colored with a bright red blush over a golden yellow ground color when mature. The flesh is yellow, firm and of good flavor; A cling when firm ripe. Trees are vigorous, and dependable bearers, and moderately susceptible to bacterial spot. Earlried should be thinned early and hard for best size.

MAYGOLD (2b) A highly colored cling needing only 650 chilling hours. Fruit is medium size, yellow fleshed, with good flavor. A light red blush covers about half the skin over a yellow ground. Trees are vigorous and productive. Maygold ripens with Redcap and is recommended for areas where temperatures averaging below 54 degrees may be expected.

REDCAP (2c) Ripens just before Dixired and resembles Dixired very much. A clingstone, medium size, round, with light pubescence. Attractive red blush covers most of the peach. The flesh is yellow, firm but melting, and of good flavor. Trees are moderately vigorous and productive. Buds require 750 hours chilling.

Another Bountiful Ridge First

SPECIAL TREATMENT MAKES OUR
PEACH TREES "BETTER THAN EVER"

At No Extra Cost To You

For the first time in the history of the nursery industry, Bountiful Ridge is pleased to offer "At No Extra Cost," peach trees grown from budwood that has been heat treated to insure its "Freedom From Virus Disease." Our trees are being grown many miles from any known source of little peach, peach yellows, red sutre, or X-disease and, because of this isolation, are essentially virus free.

We believe that our "essentially virus free" peach trees will give you, Mr. Planter, the best stock that money can buy. Combine this new practice with our regular propagating procedures—selected budwood, hardy and disease-resistant rootstocks, specially treated soils, continuous inspection, rigid storage control—and you have the best peach trees for any use that it is possible to produce. All of our peach trees, both dwarf and standard size, have been so treated. It will not, therefore, be necessary to note your wish for Virus Free trees on your order.

CARDINAL (2d) Ripens four days ahead of Dixired. Fruits are clingstone, medium size, round, light pubescence. Well covered with attractive red blush over yellow ground. Flesh is yellow, firm and of good flavor. Chilling requirements about 900 hours.

DIXIRED (2e) A round, medium-sized clingstone, with light pubescence. A beautiful red blush covering three-fourths of the surface gives Dixired a pleasing appearance. Flesh is yellow, firm but melting, and of good flavor. Dixired has unusual firmness and a slow rate of softening for an early peach. It is an excellent variety from the Carolinas northward into Canada because of its fine appearance and shipping ability.

JUNE GOLD (2f) U.S. Plant Patent No. 1884 (Grown and Sold under License from Patent Owner) A large yellow freestone ripening with Maygold and just before Coronet. Fruit is highly colored and of good flavor. Size is excellent for the season. Trees are vigorous and set heavy crops. This is a California peach which shows great promise for the East. It requires about 750 chilling hours.

PRICES FOR JUNE GOLD

	Each	10-49 each	50 or more each

Write for prices on larger quantities

ERLY-RED-FRE (3) For unexcelled size and quality, it is the best early white peach known. Growers everywhere still rave about Erly-Red-Fre. No other early peach has been as profitable and universally adaptable. There is still a place in nearly all plantings for this fine peach.

Fruits are large, averaging over 2½ inches in most cases without thinning. Color is never a problem; the fruits turn red at least on one side well before harvest date. Quality is exceptionally good. Erly-Red-Fre has long been known for its shipping and keeping qualities.

Trees are very vigorous, hardy in wood and bud, and produce large annual crops. Erly-Red-Fre resists bacterial spot and bears at a young age. Harvest time is about 95 days after bloom, in time to save expensive sprays and maintenance costs. Increase your profits by adding Erly-Red-Fre to your plantings now.

GOLDRAY (3a) A good budsport of Golden Jubilee that ripens two weeks earlier, yet retains most of the good traits of its parent. Goldray colors with a nice red blush on a golden yellow background. It will cling to the pit when not fully ripe and has a somewhat tender skin and flesh. It is best adapted to home use, road-stands, and local markets. Trees are vigorous, set heavy crops regularly, and are very hardy. Goldray is quite popular in the central states and Canada.

February 25, 1964

Thank you very much. I'm sure pleased over the trees you sent me. As long as I live, I will still buy my trees from you. I want to say once again thank you ever so much.

MRS. HUBERT HOLMES, North Carolina

SUNHAVEN (3b) True Sunhaven or Early Sunhaven mature about 10 days earlier than Redhaven. Fruit is large sized, nearly round and uniform in shape. Color is much like Redhaven, largely a pretty bright red. Flesh is clear yellow, fine textured, firm, of good flavor, and resistant to browning. It is a partial cling until full ripe. Fruits keep well and handle easily for such an early peach. Trees are large, vigorous, and productive. Sunhaven is an excellent early fresh market variety for the central and northern peach areas. **Do not confuse this Sunhaven with Late Sunhaven, which ripens with Redhaven or later.**

SUNRISE—N.J. 133 (3c) A fairly satisfactory early yellow peach which just precedes Jerseyland. Fruits are well colored, round, fairly uniform, semi-free, and of moderate size. Trees are vigorous, heavy bearers, and somewhat resistant to bacterial spot. Sunrise ships well to distant markets.

SUNSHINE (3d) (Read about this fine new variety on page 4)

JERSEYLAND—N.J. 135 (4) An early, large, firm, attractive, yellow-fleshed freestone ripening a few days before Golden Jubilee. It hangs well to the tree and is an excellent shipper. Tree is hardy, sets fruit buds freely, and comes into bearing at an early age. Jerseyland is quite popular from the Carolinas to eastern New York.

CORONET (4a) A good sized, highly colored, yellow peach ripening a few days before Redhaven. The flesh is firm, tends to stick to the pit until fully ripe, and has a very good flavor. A bright red blush over a good yellow ground color makes Coronet very attractive. Trees are vigorous and productive. Blossoms are small petaled, self-fertile, and require 800 hours to break dormancy. A very fine variety for near and distant markets.

DIXIGEM (4b) A yellow, almost freestone peach that ripens about with Redhaven. Fruits are about half covered with a pretty red blush over a golden ground color. The flesh is medium to firm, with a fine texture and excellent flavor. Originally, a southern peach, Dixigem is now more popular in many northern areas.

REDHAVEN

REDHAVEN (4c) Hardly enough can be said about this fine peach, the standard of all early peaches. It colors a beautiful red and golden yellow. The skin is smooth, almost fuzzless, resembling J. H. Hale. Flesh is very firm, smooth textured, and of good flavor. Fruits are medium sized, round, uniform, and of excellent appearance. Redhaven is one of our most versatile varieties. It is good for freezing, canning, local and distant markets. Proper thinning will allow the vigorous and very productive trees to be some of your most profitable ones. Wood and buds of Redhaven are hardy and disease resistant.

GOLDENRED (4d) A yellow freestone of high quality and good color, ripening with Redhaven. It is smooth, round, and firmer than Redhaven. Flesh is lemon-yellow, fine textured, of pleasing taste, with some red about the pit. Fruit ripens evenly, with skin color developing early to permit picking while still firm. This fine new peach was introduced to replace Redhaven in trouble areas. Try some. . . .

REGINA (4e) Ripens with Redhaven. Fruit is medium sized, with very light pubescence. Surface is covered with a bright, attractive red blush over a yellow ground color. Flesh is yellow, firm, smooth textured, and of good flavor. A freestone when fully matured. Regina is more highly colored than Redhaven and does not tend to soften first on the suture and apex.

COMANCHE (4f) A Redhaven type peach that ripens about with Redhaven. Size is exceptionally good, with little thinning required. Fruits are attractive, with firm yellow flesh, and semi-free with no split pits. Comanche has a desirable crop load with larger size fruits than Redhaven.

CUMBERLAND (5) The tree is a vigorous grower. The fruit is attractively colored with red, oval in shape. Flesh is white, almost free. Ripens just before Jubilee. Cumberland continues to be popular in all peach sections.

GOLDEN JUBILEE (5a) An old stand-by variety that is still popular for home and near-by markets. Fruits are medium to large, attractive, freestone, and of good flavor. Jubilee will be more attractive and firmer if balanced fertilizers are used. The tree and buds are unusually hardy, resisting low temperatures better than Elberta. Blossoms are self-fertile and are borne in abundance.

FAIRHAVEN (5c) A Redhaven type peach ripening about with Golden Jubilee. It has the same tendency to overcrop as Redhaven, but when thinned well it brings medium to large, round, attractive fruit. Fruits are firm, smooth skinned, and good shippers. Fairhaven is a good bet in its season.

RANGER (5d) A fine-looking yellow freestone peach ripening with Golden Jubilee. Medium to large size, almost round, with light pubescence, highly colored with bright red blush. Flesh yellow, medium firm, medium textured, good flavor and suitable for canning or freezing. Tree is vigorous and productive, showing marked resistance to bacterial leaf spot. Blossoms medium sized, self-fertile, usually open after Elberta.

KEYSTONE (6) Keystone ripens just ahead of Triogem. The fruits are large, highly colored, round, light pubescence, bright golden ground color. Flesh is yellow, firm, smooth textured and of good flavor, and a freestone. Trees are vigorous and productive, with less bacterial spot than Southland or Elberta. Blossoms are self-fertile, require 750 chilling hours.

TRIOGEM—N.J. 70 (6a) An early, oval, red all over, firm, yellow freestone peach ripening about two days after Golden Jubilee. The trees are medium in size, hardy and heavy bearers. Trees require good soil and good culture for best results. Triogem has fruited over a wide area and has gained popularity due to heavy yields, good marketing traits, and hardiness of tree.

WASHINGTON (6b) A fine new peach from Virginia that has outstanding qualities of color, size, flavor, firmness of flesh, and fine texture. The buds are extremely resistant to injury from spring frosts. It ripens about three days after Triogem and just before Sunhigh. Trees are vigorous and productive. Buds have excellent pollen and are self-fertile. Washington will do well from southern Virginia northward wherever spring frosts are troublesome. Use Washington with Madison and Jefferson for season-long coverage of frost-resistant peaches.

Dear Sir:

The strawberries came in very good condition. They were all perfect. Thank you.

MRS. MARY ANDERSON
Pennsylvania

WASHINGTON

COLORA (6c) An outstanding, hardy, early, yellow freestone peach with high color, superb quality, size, and hardiness. Colora is our own introduction of a frost-resistant peach. Trees have withstood temperatures during past winters of about 17 degrees below zero, when most other varieties were wiped out by these low temperatures. The peach is an attractive yellow freestone ripening just after Golden Jubilee.

NEWDAY—N.J. 79 (6d) A large, oval, yellow-fleshed peach which ripens a few days after Triagem. The tree is more vigorous and produces larger fruit than Triagem. The fruit is showy, firm in texture, and hangs well to the tree.

SUNHIGH—N.J. 82 (7) A large, bright red, smooth peach which colors well before it ripens and softens slowly, making it a good commercial peach. Flesh inclines to adhere to the pit when hard ripe, but is generally freestone. Tree is spreading in growth, and dormant buds are hardy. Seems to do best in hilly sections and requires thorough summer spraying.

SOUTHLAND (7a) Yellow-fleshed variety ripening in Sunhigh season. Fruit is a freestone, medium to large size, round, and has little fuzz. Color is attractive, with a light red blush covering about half the peach at shipping stage. Flesh is yellow, firm, slow softening, medium textured, good flavor. Trees are vigorous and productive, blossoms large, self-fertile.

SUMMERQUEEN—N.J. 157 (7b) A high quality large, attractive, firm, yellow-fleshed peach ripening about with Sunhigh. Less susceptible to bacterial spot than Sunhigh. Has large, showy, imperfect blossoms which need pollination. Sets good crop with proper cross-pollination and is recommended to replace Sunhigh where bacterial spot is a problem.

SPECIAL NOTE: We want you to plant BOUNTIFUL RIDGE trees. Our trees are as good as can be produced. When you need more than 300 peach trees, send us your list and we will quote you special prices consistent with market conditions at that time.

LORING (8) A new yellow freestone with wide adaptability. This promising new peach resembles Jubilee in color and shape, but is much firmer and does not soften at the suture or the tip. It has an attractive bright red and yellow color over a yellow ground color. Loring ripens about two weeks ahead of Elberta. It has been found an excellent variety for fresh market and processing use.

JULY ELBERTA—Burnett Elberta (8a) A large, medium early, freestone peach ripening with Hale Haven. Golden yellow color overspread with red. It can be picked for shipping about four days before ripening, because of its early color. The quality is excellent for canning and fresh eating. It shows better than average results when frozen. The variety does well in all peach sections.

REDGLOBE (8b) Ripens 15 days before Elberta. Fruits large, round, with light pubescence. Skin is highly colored with red over a good yellow ground color. A freestone. Complete absence of red in the flesh makes it an outstanding canning peach. Very good quality. Chilling requirements about same as Elberta. Blossoms are large and self-fertile.

RICHHAVEN (8c) Fruits are large, uniform in size and shape. Color a bright red blush with stripes of red and gold laid over a bright golden ground color. Fuzz is unnoticeable and an unusually thick, tough skin adds to its handling and shipping ability. Flesh is a clear yellow with moderate reddening around the pit. Entirely a freestone when ripe. Ripens with Hale Haven, or 14 days before Elberta.

HALE HAVEN (8d) Large, oval-shaped fruits are borne on a strong, thrifty tree that is resistant to most common peach diseases. The skin is tough, and the flesh is of such texture that it will not bruise easily. A beautiful red color and excellent flavor attracts the most exacting buyer. Hale Haven is probably our best peach for quick freezing.

RICHHAVEN

BLAKE

JULY HEATH—Othello Cling (8e) A large white cling, ripening latter part of Hale Haven season. A beautiful peach, strong growing tree, hardy in bud. Very high in quality. We recommend this peach to anyone desiring a white cling for all purposes. Sometimes called July or Summer Cling.

GOLDEN EAST—N.J. 87 (8f) A large, oval, firm, melting, highly colored, yellow-fleshed peach ripening about 15 days before Elberta. Usually a freestone. Does best on sites south of Central New Jersey where favorable elevations, soil and climate prevail. Tree is upright, spreading and vigorous. Medium in hardness.

ECLIPSE (9) A dark red, yellow-fleshed freestone peach of firm texture and good flavor. Tree is very vigorous. The fruit is oval in shape, flesh fine grained. An excellent shipper; hangs well to the tree and can be harvested over a long period.

CHAMPION (9a) Long known as an excellent white peach, Champion fills a definite need in this particular season. Its large, quite regular and beautiful, freestone fruits ripen between Cumberland and Belle of Georgia. The tree is very hardy and productive. Champion is the best variety to fill this part of the white peach season.

SUNCREST (10) A new, large, round, yellow freestone that ripens about 10 days earlier than Elberta. Fruits have light pubescence and are two-thirds covered with a bright red blush over a golden yellow ground color. The flesh is firm enough for distant shipment and is of good flavor. Trees are vigorous and productive. Blossoms are large petaled and self-fertile.

SULLIVAN'S EARLY ELBERTA (10a) An old favorite that leads the early Elberta season. Sullivan ripens ahead of the regular Early Elberta and Belle of Georgia. Fruits average large in size, with extra fine quality and shipping ability. The tree and fruit characteristics are identical with Elberta.

REDSKIN

POPPY (10b) It ripens 8 days before Elberta. The fruits are large, shaped like Elberta, seem to size well with heavy crop. Poppy has attractive red color showing well before peach is ripe. Fruits are firm, yellow fleshed, freestone, of fine texture and flavor. A good shipping peach. Its season and general characteristics are such that it should have a place in most orchards.

REDCREST—N.J. 26 (10c) A large, attractive yellow-fleshed freestone ripening about a week before Elberta. The skin color is a beautiful crimson-red which resembles Sunhigh. The quality is supreme, flesh golden yellow, firm and juicy. Tree is productive and a vigorous grower. Redcrest is an airfree peach.

MADISON (10d) The newest frost-resistant peach to come from Virginia. Madison is yellow, freestone, firm, fine textured, and of good quality. Fruits are well colored with bright yellow overlaid by a bright red blush. They are very attractive and sell well. The tree is of average vigor and produces a heavy crop annually. Plant Washington and Jefferson with Madison for full-season coverage of frost-tolerant peaches.

BLAKE (10e) A widely planted and most satisfactory peach in nearly all major areas with the exception of the Deep South. Blake is a highly profitable variety to precede Elberta. Its freestone fruits are medium to large and very highly colored, with an attractive red over a good yellow ground color. Flesh is very firm, with considerable red extending out around the pit, and of excellent flavor. Trees are good growers, ranking with Elberta in hardness of bud and tree, and are very productive. Size, good color and time of ripening make Blake the peach to precede Elberta.

EARLY ELBERTA—Gleason Strain (11) A fine commercial peach in areas where markets are not too distant and quality is important. Large, attractively colored, yellow-fleshed, freestone fruits make it one of the most beautiful Elberta type peaches. It has excellent quality and ripens with Belle of Georgia. Trees are hardy, thrifty, and bear consistently. Do not confuse other strains of Early Elberta with this, the original Gleason Strain Early Elberta.

WHY PLANT BOUNTIFUL RIDGE PEACH TREES?

1. Only selected bud stock of known parentage used in propagation.
2. Our rootstocks are the best money can buy—selected for rapid growth, hardiness, and disease resistance.
3. Only soil which has been especially treated to produce high food value for normal development is used to grow our trees.
4. Continuous inspection of trees from seedling to finished tree, with correct spraying compounds, timing and technique to keep trees healthy while growing.
5. Rigid control of varieties from cutting of budwood—checking workers during budding time—correct charting of all varieties—more checking at digging time plus further checking in storage insures true-to-name trees.
6. Constant searching for new and better varieties and improved strains of old commercial favorites goes on year after year by men trained to recognize all factors which influence the selection of finer trees and varieties.

SUMMERCREST—N.J. 94 (11a) A large, oval freestone peach of fine quality, ripening with Belle of Georgia. The flesh is deep golden yellow, melting and sweet. Tree is exceptionally vigorous, and as hardy as J. H. Hale. It is adapted to regions having a climate similar to central and southern New Jersey.

BELLE OF GEORGIA (11b) The unquestioned favorite of all white peaches and a household word with the buying public. Fruits are large, bright, attractively covered with red over a creamy white background. The flesh is white, highly flavored, very firm, and aromatic. Trees are very vigorous, hardy, and productive. Belle of Georgia is the standard by which all white peaches are judged.

POLLY (11c) A very hardy peach bearing big crops after 20-below-zero winters. It is a freestone of exceptional quality, with a keen peachy taste, juicy and aromatic. The color is a beautiful white overlaid with a rich red blush. Recommended to all growers who wish an exceptional white peach in Elberta season.

HALE HARRISON (11d) U. S. Plant Patent No. 814. We offer this fine peach, often called Hale Harrison Brilliant or just Brilliant, under license from the patent owner. It ripens just before Elberta, is yellow fleshed, freestone, nicely colored, nearly fuzzless, and generally large throughout the tree. Blossoms are self-fertile and abundant. The tree is vigorous and a heavy bearer.

Hale Harrison is a good shipper, long keeper, and picks over a long season. Its exceptional quality makes it a favorite for fresh market and processing outlets. Price for Hale Harrison trees is 10c more per tree than for regular varieties.

REDSKIN (12) Each year Redskin becomes more popular as the leading peach of the Elberta season. It is a very pretty, large, round freestone with excellent shipping qualities. The yellow flesh is very clear, firm, aromatic, and sweet. Fruits of Redskin are borne in profusion throughout the tree and color well with a deep red blush, even under shady conditions. Processors and fresh market buyers are equally pleased with this fine peach.

Trees of Redskin are vigorous, fast growing, and productive. The wood is hardy, and buds survive low temperatures when trees are in good physical condition. Redskin trees have the ability to size generous crops well under most conditions. Why don't you bring your plantings in this season up-to-date with Redskin?

DIXIELAND (12a) This fine new peach is a large freestone and has little pubescence. At maturity, about 50% of the surface is covered with an attractive red over a golden yellow ground. The flesh is yellow, firm, of good texture and flavor. It ripens about with Redskin and Elberta.

Trees are vigorous, productive, and self-fertile, somewhat resistant to bacterial spot and have a chilling requirement of 750 hours.

Dixieland was introduced primarily for southern areas, but we believe it worthy of trial in all peach areas.

ELBERTA (12b) The world's greatest money-making peach. Elberta trees are hardy, disease resistant, very thrifty, and very productive under most conditions. Fruits are large, freestone, colored a deep golden yellow blushed with red. The skin is tough, and the flesh, while tender and juicy, is of such texture that Elberta is famous for its ability to carry to distant markets. Quality is good, and the slight bitterness around the pit is preferred by many. Even though Elberta is an old variety, you may be sure that you will receive the best of Elberta strains from Bountiful Ridge.

J. H. HALE (12c) It is one-third to one-half larger than Elberta and more highly colored. The skin is deep crimson, smooth, and almost without fuzz. Flesh is golden yellow, firm, and most delicious. A freestone with unusual keeping qualities. Fruit ripens a few days before or with Elberta, but hangs better. NOTE: J. H. Hale does not have an entirely perfect bloom and needs cross-pollination for best results.

WHITE HALE—N.J. 63 (12d) A large white-fleshed freestone of good quality, ripening with J. H. Hale. Tree is vigorous. A fine white-fleshed peach to follow Belle of Georgia.

JERSEYQUEEN (12e) A fine new variety, formerly tested as N. J. 216, which ripens with Elberta. It has better color, better quality, and better shelf life than Elberta. It is large and attractive. Trees are vigorous and productive. Flowers are large and showy, with good pollen. Yields have been satisfactory on limited acreage, even after the hard 1962-63 winter.

JEFFERSON (13) Jefferson is a new, round, yellow-fleshed freestone ripening about two days after Elberta. Fruits are quite comparable to J. H. Hale, but the color is much brighter. The trees of Jefferson are more vigorous than Hale and produce a heavy set of buds which are self-fertile and quite tolerant to spring frosts. We suggest that you use Jefferson in combination with Washington and Madison for a full season of frost-tolerant peaches in any area where spring frosts present a problem.

AFTERGLOW—N.J. 84 (13a) Ripens three to five days after Elberta. Fruits are large, round-oval in shape, and almost completely overspread with red. The flesh is yellow stained with red about the pit, and is free. The trees are vigorous and rapid growers. Fruit buds appear more hardy than J. H. Hale.

SHIPPERS LATE RED

✓ **SHIPPERS LATE RED—Hale Type (13b)** A proven variety to follow Elberta which has class and is a good money-maker. Fruits, which ripen just after Elberta and Hale, are very large, very highly colored, yellow fleshed, freestone, and of exceptional quality. Shippers Late Red is a good shipper, stores well in cold storage, and is extremely productive. Its excellent appearance causes it to bring highest prices. **Hale Type Shippers Late Red** is the best of the many strains of this fine variety. Be sure you are getting the best and plant **GENUINE HALE TYPE SHIPPERS LATE RED** from Bountiful Ridge this year.

✓ **GAGE ELBERTA (13c)** A famous budsport of Elberta that is resistant to bacterial spot. Trees grow as well as those of Elberta, although more spreading in habit. Gage blooms two to four days after Elberta. Blossoms are very strong and set fruit under unfavorable conditions. The fruit is so much like Elberta that only an expert can distinguish between them. Gage ripens a few days after Elberta.

✓ **BRACKETT (13d)** Extend your Elberta season with this fine peach whose popularity is increasing. Brackett ripens about five days after Elberta, and its beautiful, large, orange-yellow fruits tinged with carmine bring high market prices. Fruits have deep yellow flesh that is much lighter in flavor than Elberta. Brackett sizes well under heavy crops, ships well, is freestone, and an excellent peach in most areas extending from Mississippi northward.

✓ **GEMMERS LATE ELBERTA (14)** An extra large, beautifully colored peach with high quality and fine shipping ability that follows Elberta by about 10 days. Fruits of Gemmers are larger than Elberta, more highly colored, and somewhat more round. Its good, tough skin is nearly covered with a brilliant red color. Flesh is firm and slightly tinged with red around the pit. Trees are vigorous, productive, and long lived. Many growers have used Gemmers Late Elberta as an excellent substitute for Rio-Oso-Gem. Gemmers brings high prices, high yields, and stores well.

✓ **RIO-OSO-GEM (14a)** A widely grown, beautiful, Hale type peach that ripens 7 to 10 days after Elberta. It is large sized, with brilliant red color and light pubescence. The flesh is firm and fine textured, with excellent flavor. Rio-Oso-Gem is best known as a highly profitable fresh market peach, but it is equally good as a canning and freezing variety. Trees are not very vigorous, but set good crops each year.

✓ **SO GOOD (14b)** A new yellow freestone from Maryland ripening about with Rio-Oso-Gem. Fruits are large, highly colored, and most nearly resemble Redskin. It crops annually, with good yields. Trees are vigorous and healthy, more upright than Redskin. So Good should have a place in your plantings.

✓ **LIZZIE (15)** An old variety with a proud history of grower success in most central and eastern peach areas. Lizzie is a distinct Elberta type which has size, color, firmness, and high quality. It is a freestone with fine-textured, yellow flesh. It ripens 12 to 16 days after Elberta, with handsome red color over a deep yellow ground color. Fruits are good for shipping, local markets, and processing. Trees are vigorous, hardy, heavy and annual bearers. Many growers consider it the best of our very late peaches.

✓ **AUTUMN—N.J. 145 (16)** A large, yellow freestone that ripens just after Lizzie. Fruit colors a good yellow with a fine red blush on one cheek. The tree is very vigorous and should be planted on well-drained peach soil. Autumn is just the peach for the grower who wishes good size, high quality, very late fruit for roadstand or nearby markets. In recent years, Autumn has been stored in cold storage well into the fall.

The Ile de France butterfly bush and Chinese Chestnut arrived, the plants look very green, and healthy so I am sure that they will flourish.

Varieties listed in order of ripening

LEXINGTON A yellow-fleshed variety ripening about 17 days before Elberta, with average-sized, freestone fruits 2 inches or more in diameter. The skin is a deep yellow overlaid with red, giving an attractive appearance. The flesh is medium textured and of good flavor. Lexington is resistant to brown rot when regular peach spray is used. The trees are vigorous and set a large amount of fruit buds which are relatively hardy.

✓ **REDBUD** A white-fleshed, average-sized freestone ripening about 27 days before Elberta. A good bright red, attractive, smooth skin covers the fruits which are above average in firmness, medium in texture, and of good quality. The trees are of average vigor and produce heavy sets of buds. They are highly resistant to brown rot when a standard peach spray schedule is followed. Buds are more tolerant to late frost than Redchief, but slightly less than those of Cavalier.

✓ **REDCHIEF** One of our best white-fleshed varieties. Fruits are of good size, highly colored, freestone, and with a very pleasing flavor. Trees are thrifty and productive, with a marked resistance to brown rot. Redchief ripens about 13 days before Elberta and is moderately tolerant of spring frost.

✓ **GARDEN STATE** A large, firm, freestone, yellow-fleshed nectarine that ripens with Hale Haven and Redchief, 12 to 15 days before Elberta. An orange-yellow undercolor is overspread with red to give it a fine appearance. Trees are vigorous and productive. One of our finest nectarine varieties.

✓ **CAVALIER** More highly colored than Redchief. It has good size, fine yellow flesh with high quality, marked resistance to brown rot, and is a freestone. Trees are vigorous and productive, setting abundant quantities of fruit buds that are quite tolerant of spring frost. Cavalier ripens about eight days before Elberta.

Nematode-Resistant Peach Trees

ON NEMAGUARD ROOTSTOCKS

New Nemaguard seedlings have proven to be resistant to the common nematodes found in most peach areas. Use of these rootstocks will enable you to continue growing peaches profitably in infested areas. Nemaguard is a new seedling rootstock introduced by the U.S.D.A. that is far superior to Yunnan and other older and similar nematode-resistant rootstocks. We are now using ONLY Nemaguard as a nematode-resistant understock for peach.

Varieties listed in order of ripening

✓ **BRUCE** (1) One of the best Oriental plums for southern planting. It ripens very early, averages good size, is very firm and has fine quality for such an early variety. If picked just as the yellow background appears, it will ship well and color a pretty, bright red in three to four days. Bruce is very productive, but requires pollination.

✓ **METHLEY** (2) A fine variety with excellent quality and handsome appearance. Fruits are medium to large in size, reddish purple in color with red flesh. They are juicy, sweet, and of distinctive flavor. Trees are very vigorous, upright in growth. Buds are hardy, abundant, and self-fertile.

✓ **SHIRO** (3) A very early Oriental plum with beautiful yellow color and good flavor when allowed to mature properly. Fruits are of medium size, and suitable for cooking, canning, and dessert use. Requires pollination.

✓ **RED JUNE** (4) A mottled, garnet-red variety with firm, light yellow flesh that is aromatic and sweet. Trees are large, vigorous, hardy, and productive. Fruits are clingy, resist brown rot and curculio. Red June is an Oriental variety that is a good pollinator for Shiro and is self-fruitful.

✓ **BURMOSA** (5) A new variety that is gaining favor in southern areas. Fruits have greenish yellow skin that is blushed with purple. Flesh is light yellow. Burmosa is large, freestone, rather early, and good for fresh use and shipping. Trees are spreading and resemble Burbank. Not self-fertile; plant with Santa Rosa.

✓ **ABUNDANCE** (6) A very good Oriental plum. Trees are rapid growers, healthy, and bear early. They produce abundant yields of medium-sized, rich bright cherry-red, and highly perfumed fruits. Flesh is light yellow, juicy and tender, and of excellent quality. A good pollinator for Shiro and other Oriental varieties.

✓ **BURBANK** (7) A large, bright reddish purple plum that is meaty and quite firm. It is hardy and prolific, and best fruits are obtained when well thinned. Trees are low growing, flat topped, and somewhat drooping. Burbank is valuable for canning and fresh market use. An Oriental variety that does much better with pollination.

✓ **OSARK PREMIER** (8) A very large, firm, red Oriental plum that is gaining wide grower approval. Fruits have yellow flesh that is juicy, tart, and clingy but with good flavor. Trees are hardy, productive, and vigorous. Self-fertile.

✓ **BRADSHAW** (9) An early European plum with good size, fine dark violet-red color, good shipping and keeping ability. The flesh is yellowish green and has excellent flavor. Trees are hardy and excellent growers, producing heavy annual crops. Not self-fruitful.

✓ **SANTA ROSA** (10) One of our best Oriental plums. Fruits are large, conical, uniform, juicy, flavorful, and colored purplish crimson with a pale bloom. Trees are large, vigorous, and productive. Blossoms are self-fertile, but produce larger crops when planted with another variety.

SATSUMA (11) One of our best home canning and preserve plums. Fruits are large, almost round, with deep dark red skin. Flesh is purplish red, juicy, sweet, firm, and has fine flavor. A semi-freestone Oriental variety that needs pollination. Plant with Santa Rosa for best results.

FELLENBERG (12) An old European variety widely known for dessert, market, and drying usage. Fruits are long, large, oval, purple covered with a thick bloom. Flesh is firm, sweet, juicy, and delicious. A freestone. Trees make moderate growth and are hardy. Self-fruitful. Also known as Italian or German Prune.

YELLOW EGG (13) A late European variety that produces large, golden yellow fruits. Fruits have heavy skin and yellow flesh that is juicy, mild, and fine in quality. A freestone adapted to home, market, or culinary use. Trees are vigorous, round topped, hardy and very productive. Self-fertile.

METHLEY PLUM

STANLEY (14) The most popular of all prune plums, it is excellent for home use and commercial planting. Fruits are large, of fine quality, and colored deep purplish blue. The flesh is greenish yellow, juicy, tender, firm, and sweet. Trees are vigorous, hardy, bear early, and produce large annual crops. Freestones. Self-fertile.

SHROPSHIRE (15) One of our most esteemed preserving fruits. Damson plums are borne in profusion by good, vigorous trees. Fruits are oval, of medium size, and dark purple in color. A European variety that is self-fruitful.

APRICOTS

STELLA A hardy Russian type apricot that is very cold resistant. Produces good crops of fruit where other varieties freeze out. The fruit is medium size, golden yellow in color, and delicious in quality. A freestone. Recommended for all sections where peaches can be grown.

EARLY GOLDEN A good variety. Very large, deep golden yellow, fine in quality.

SUPERB Rated by many as the best. The tree is large, very thrifty and hardy, and is extremely productive. Very good quality. Fruit is beautiful yellow with slight blush; flesh firm and solid.

MOORPARK One of the largest Orange-yellow with numerous specks and dots; flesh yellow, sweet, juicy, and rich. August.

NEW EXTRA HARDY APRICOTS FOR HOME AND ORCHARD

Moongold and Sungold 75c higher than regular varieties.

MOONGOLD A very hardy new apricot for northern areas. Fruits are medium in size, orange-yellow, freestone, and of good quality. Ripens earlier than Sungold; self-unfruitful but pollinated by Sungold. Trees medium sized, rather spreading, vigorous, and do well in cold climates. For home gardens.

SUNGOLD A sister seedling of Moongold that ripens later. Fruit gold with orange blush, medium size, very high quality, freestone, and hangs well until ripe. Tree is medium sized, rather upright, exceptionally winter-hardy, very productive, self-unfruitful but pollinated by Moongold. For home use.

CERTIFICATION OF INSPECTION—DUPLICATE OF NUMBER 23

August 14, 1964

THIS IS TO CERTIFY, That the nursery stock of Bountiful Ridge Nurseries located at Princess Anne, Somerset County, State of Maryland, has been officially examined in accordance with the laws of Maryland, 1898, Chapter 289, Section 58, and that said nurseries and premises were found to be apparently free from dangerously injurious insect pests and plant diseases.

THIS CERTIFICATE does not include nursery stock not grown within this state, unless such

stock is previously covered by Certificate and accepted by the State Entomologist and State Plant Pathologist. Unless sooner revoked, this certificate is valid until September 30, 1965.

L. O. WEAVER, State Plant Pathologist
GEO. S. LANGFORD, State Entomologist

In addition to the above Certificate every shipment going outside of the infested area of the Japanese Beetle has a certificate of the U. S. Department of Agriculture showing the shipment is free from Japanese Beetle.

Varieties listed in order of ripening

SENECA Ripens two weeks before Black Tartarian. The cherries resemble Black Tartarian—large, round-cordate, purplish black, with juicy melting flesh and a rich sweet flavor; the pit is free and the skin does not crack. The tree is vigorous, productive, and has upright, spreading habit of growth. Early.

EARLY RIVERS This fine cherry is highly regarded by cherry growers in eastern New York. Ripens a few days later than Seneca and 10 days ahead of Black Tartarian. It is larger and firmer in flesh than Tartarian. Crimson-black in color and excellent quality for dessert. Early.

BLACK TARTARIAN Very large; bright purplish black; tender, juicy, very rich. Tree a remarkable vigorous and erect grower, and is an immense bearer. Early.

VERNON The fruit is large, firm fleshed, black, and ripens just before Bing. The tree is vigorous and productive.

BING This valuable black cherry succeeds everywhere. Flesh very solid; flavor of the highest quality. A fine shipping and market variety. Midseason.

VICTOR Fruit resembles Napoleon and ripens between Gov. Wood and Napoleon. Fruits are large, medium firm fleshed, light colored, and of excellent quality. Tree is large, vigorous, and productive.

NAPOLEON BIGARREAU (Royal Ann). A beautiful cherry of large size, pale yellow with bright red cheeks; flesh firm, juicy, and sweet. One of the best for market. Midseason.

EMPEROR FRANCIS Large, high quality cherry of the Napoleon type. Ripens just before Napoleon and is less subject to cracking. Promises to be one of the best main-crop sweet cherries of the Napoleon type. Midseason.

BLACK RUSSIAN One of our finest new, hardy sweet cherry varieties. Trees are vigorous, very hardy, and highly productive. Crops are seldom affected by low winter temperatures or spring frosts. Fruits are medium in size, do not crack, and show little tendency to brown rot before picking. Cherries are almost black in color, freestone, and very flavorful. Ripens just before Schmidt.

SCHMIDT'S BIGARREAU This fruit is very large size, with a fine rich flavor. Fruit grows in clusters. Is an excellent shipper. Tree is vigorous and one of the hardest of all sweet cherries. Midseason.

GIANT Bears dark red cherries attractive in size and color; ripens just before Lambert. Quality is splendid. Less subject to cracking than Bing. Tree is large, vigorous, and very productive.

LAMBERT One of the largest of all cherries. It is purple-red, firm and rich. Every year sees an enormous crop. The tree not only grows well, but is very resistant to insect and fungus attacks. Midseason.

WINDSOR Tree upright, vigorous and a rapid grower. Fruit almost black, very firm and juicy; flesh pinkish and sometimes streaked. Quality very good; a productive bearer. A leading commercial variety, used widely for pollination purposes. Midseason.

HEDELFINGEN Ripens just ahead of Windsor and Lambert. Its performance in New York, Canada and Europe justifies its being recommended as a large, firm-fleshed, high quality, late black cherry of the Lambert type. The fruit has the valuable attribute of being more resistant to cracking than most cherries.

SOUR CHERRIES

A SOUND INVESTMENT FOR PROFIT

PRICES OF SOUR CHERRY TREES

					100 or more
		3-9	10-49	50-99	each
	Each	each	each	each	each
2 yr., 4-6', 11/16" up	\$3.25	\$2.55	\$2.00	\$1.50	\$1.25
2 yr., 3-5', 9-11/16"	3.00	2.15	1.90	1.30	1.15
2 yr., 2-4', 7-9/16"	2.75	1.90	1.65	1.20	1.05

Prices and grades on 1-year Sour Cherry are the same as on 2-year trees.

Write to us for special prices if you are interested in large quantities. Please give definite grades and quantities wanted, and we will give you the advantage of any possible seasonal market changes.

Note: Sweet Cherries bear heavier and more regular crops where properly cross-pollinated, and two or more varieties should be planted together.

Again note that Napoleon, Bing, Lambert, and Emperor Francis are incompatible; a third variety should be planted with them.

Sour Cherries are generally self-fruitful and will cross-pollinate Sweet Cherries to a greater or lesser degree, depending on seasonal bloom period variations.

BOUNTIFUL STRAIN IMPROVED MONTMORENCY (DAYTON STRAIN)

Large Size—Vigor of Growth—Productivity—Plus
Virus-Free Planting Stock Make It Superior to all
Other Types of Montmorency.

It was discovered in the orchards of Clyde S. Mumma, Dayton, Ohio, in a general planting of Montmorency trees. When we first saw the tree it was about 10 years of age and loaded down with fruit, having a heavier crop than any other trees adjoining it. All trees had the same attention, and Mr. Mumma says it had always borne this large type of Montmorency. The tree is vigorous but not any larger than other trees. The fruits have the same rich red color as other Montmorency cherries but seem to be slightly more mild in flavor. Its immense size immediately attracted attention. We grew several hundred trees of this type for Mr. Mumma's own planting and now pass it on to our customers at no additional cost to them. Nature again contributes an improved type to our greatest sour cherry.

EARLY RICHMOND One of the most valuable and popular cherries, unsurpassed for cooking purposes. It is the good old variety that yields such marvelous crops in gardens. The most hardy of all varieties, uninjured by the coldest winters.

QUINCE TREES

ORANGE An outstanding fruit for jam and jelly. Fruits are borne on small, dwarf-like trees and are profitable for fruit growers, farmers, and home gardeners. Large crops of roundish, bright yellow, very large fruits of fine quality are borne annually. Trees take little room and are easy to grow.

CHAMPION Fruits are very large, handsome, and lighter in color than Orange. Trees bear abundantly while young. Flesh of Champion is tender, without hard spots and cores. Flavor is very delicate and delicious for any purpose.

Skyline

SUPREME

RED DELICIOUS

New! EARLY COLORING — EARLY RIPENING — EARLY BEARING

SKYLINE SUPREME is a tree sport of the Starking variety originating in the orchards of Wm. E. Dalton, high in the hills of the Blue Ridge, near Hendersonville, N. C. It is particularly outstanding because of its early coloring and early ripening habits.

Fruits of SKYLINE SUPREME reach full color and maturity several weeks ahead of such varieties as Richared and Starking, and many days earlier than most of the other recently introduced early coloring types. They color equally well under shaded conditions or in normal light. In the Hendersonville area, where all the testing has been done, fruits of SKYLINE SUPREME have normally had sufficient color by the first of August to pack 100% Extra Fancy. Actual maturity is about 10 days later but still much earlier than its closest competitors.

The color of SKYLINE SUPREME is a beautiful blush-red without a trace of a stripe. This fine apple is endowed with a double pigmented layer adding brilliance and lustre to its color.

Under Appalachian conditions, SKYLINE SUPREME tends to exhibit a strong habit toward the sheep-nosed condition which is prevalent among western-grown Delicious. The tree is vigorous, bears young, and sets large crops of good-sized, highly colored fruits. The blooms of SKYLINE SUPREME are similar to and come at about the same time as other types of Red Delicious. They also need pollination for best results.

SKYLINE SUPREME is truly of eastern origin, and we feel it is much more adapted to our general conditions than types from other areas. From our observations and comparisons of many newly introduced types over the last several years, we heartily suggest its trial in all Red Delicious growing areas in the eastern United States, even at low elevations.

SKYLINE SUPREME is a regular tree type sort of Delicious. We have grown them on semi-dwarf (Malling VII) anchor rooted trees for those who would like the smaller tree. Price is 10c per tree higher in all grades and quantities than regular apple varieties, standard and dwarf.

KING LUSCIOUS is probably the largest good apple to come to the planter in many years. KING LUSCIOUS was found by the late Wm. M. Dalton of Hendersonville, N. C., who later crossed it with Red Delicious and King David, resulting in the fine apple which we are pleased to introduce to our trade.

KING LUSCIOUS is a very large, highly colored apple with good keeping, eating, and cooking qualities. The skin is a deep red at maturity with a beautiful bloom. The flesh is pure white with excellent flavor. The season of ripening is with Rome Beauty and Stayman, although it may be picked sooner for cooking purposes if desired. The tree is a young and annual bearer, blooming a week after Rome Beauty to make it almost completely frost-proof.

The tree is semi-dwarf in habit, sets its scaffold branches well, and needs little pruning. Both tree and fruit are resistant to apple scab.

We believe KING LUSCIOUS has a place in every planting, not only because of its large size and attractive appearance, but because it is the most frost-resistant apple variety we know of.

Please refer to inside back cover for color illustration of this new and wonderful apple.

CRAB APPLE

HYSLOP Season September to October; tree vigorous, very hardy. Fruit medium yellow ground with heavy shadings of deep crimson and splashes of maroon with heavy blue bloom. Flesh fine, firm, yellow, astringent. Bears abundantly in clusters, which makes tree exceedingly ornamental.

DOLGO A handsome red crab apple of medium size. The fruit jellies easily and makes rich ruby-red jelly. Tree hardy, vigorous, productive, medium size, and especially adapted to ornamental planting.

APPLE SEEDLINGS

Save Those Valuable Damaged Producing Trees by
Bridge Grafting and Low Inarch Work

This is the common apple seedling that has been used in propagating apple trees for generations. We can supply these two-year-old, 'strong roots and one-year tops in the following sizes and prices (supply limited):

	10-50	50-200	200 or more
	each	each	each
3-4'	\$0.50	\$0.40	\$0.35
2-3'45	.35	.30
18-24"35	.30	.25

Note: The ripening order of varieties is designated by a bracketed number after the name. Varieties overlapping in ripening season are indicated by subletter. We are endeavoring to give the ripening order and not the picking order, for this will vary greatly according to the grower and where they are marketed. We trust this listing will be helpful to you.

WRIXPARENT (1) Earliness, Annual Bearer, Large Size, Quality, Good Shipper, Early Bearing, and Blight Resistance all tell the story of this fine apple. It was found as a chance seedling in a Yellow Transparent orchard. Ripens 10 to 15 days earlier than Transparent, is an attractive light green without markings, white fleshed, fine texture, sub-acid in flavor, and rates high as a cooking apple.

YELLOW TRANSPARENT (2) Holds a long record as our most widely planted early commercial apple. Tree is upright, hardy, early bearer. Good size; skin clear white to pale yellow in color. Flavor very good. An excellent cooking apple known to the housewife everywhere. Ripens early July.

LODI—Big Transparent (3) One of our very best early apples, it has the same quality and flavor as Yellow Transparent but it is much larger and firmer. Fruits ship well and do not show bruising. Ripening date is a few days later than for Transparent, but Lodi can be picked earlier because of good size. Trees are spreading, vigorous, and productive. Needs pollination.

WILLIAMS' EARLY RED (3a) Among the earliest to ripen and the largest of all early apples, a better name for it is "Big Red Apple." Flesh is white, juicy and slightly tart, tender and crisp. A very good one, like Transparent. Bears heavily on young trees.

EARLY MCINTOSH (4) A McIntosh Hybrid, being almost red in color, very crisp. A thrifty grower and a regular bearer. Your opportunity to have the McIntosh type as a very early apple. Cash in on the popularity of the McIntosh by growing Early McIntosh for your markets.

STARR (4a) One of the finest early apples grown. Can be picked over a long period of time. Large and of a fine yellowish color. A great bearer and a valuable market variety; comes into fruiting very young.

SUMMER CHAMPION (4b) A bright red apple ripening in midsummer, with good size and fair quality. The trees bear early and produce heavy crops. We feel this fine-looking apple should have a place in most plantings of summer apples. It is good for local and distant markets.

PURITAN (4c) A new McIntosh type which picks about with Early McIntosh. It has a fine red-blush color and averages larger than Early McIntosh. It is more acid than Early McIntosh and rates fair to good for dessert purposes. Puritan is recommended for trial in orchard plantings.

SKYLINE SUPREME DELICIOUS

RED GRAVENSTEIN (5) This favorite of many years as a summer apple of fine quality and shipping ability is now offered in a Red Strain. Large, well colored, with slightly yellow flesh of fine quality. Tree is vigorous and productive. Ripens somewhat irregularly and should be picked several times.

BEACON (5a) A highly colored, early apple with excellent eating and shipping qualities. Ripens just before Wealthy and after Williams' Early Red. The tree is vigorous, healthy, and a heavy producer. Fruit hangs well and can be picked over a long period of time to get the best size and color. Averages 2½-inch fruit with normal crop.

BLAZE (5b) A new Jonathan type apple ripening about 3½ weeks earlier than Jonathan. Fruit is medium in size, attractively blushed with red over golden yellow, and somewhat less tart than Jonathan. Tree is upright, spreading, vigorous, and productive. Blooms two days after Jonathan.

MILTON (6) Typical McIntosh, coloring full red; very good quality, about equal to McIntosh, being same texture apple. Tree hardy and vigorous. Ripens three to four weeks before McIntosh or just before Wealthy.

RED WARRIOR (6a) The tree is vigorous, well formed similar to McIntosh, and bears regularly. The fruit is large, normally averaging better than 3 inches. The skin is smooth, colored a brilliant red from stem to calyx, and does not bruise easily. Its ripening season is about with Wealthy or a little earlier. It is sub-acid in flavor and is an excellent cooking variety. The apple is shaped nearly like a Stayman.

NIAGARA (6b) A 1962 introduction from New York which provides a McIntosh type apple about two weeks earlier. In appearance, flavor, and tree habit, Niagara is very similar to McIntosh. Its desirable picking season and similarity to McIntosh should help its commercial acceptance.

WEALTHY (7) This beautiful, moderate sized, brilliant red apple is of fine quality—one of the best of its season. It is a relatively good keeper, and owing to the hardness of the tree, its adaptability to cold climates, and early bearing habits, it can be profitable as a filler.

SUMMER RAMBO (8) Large, flat, streaked red and yellow, very tender, juicy and fine flavored. Tree is a very vigorous, semi-spreading grower, hardy and productive.

SKYLINE SUPREME DELICIOUS (8a) See full description on page 18. See color illustration on cover page.

IMP. ALL RED MCINTOSH (8b) Our own special selected strain of the famous McIntosh apple. Known in some areas as Imperial McIntosh, this fine apple brings the grower excellent blush-red color, large size, and consistent crops. This is the finest red strain of McIntosh we have ever seen.

LOBO (9) About same season as McIntosh, with a larger apple that colors a more full red than regular McIntosh. Extra good quality. Tree equal to McIntosh. Comes highly recommended to replace the regular McIntosh for Middle Atlantic and southern growers.

CORTLAND (9a) An improved McIntosh type. The fruits of the two varieties are similar but those of Cortland are more oblate, average larger, and are more uniform in size; they have more color and the red is lighter and brighter and the striping and splashes are laid on differently. The taste of Cortland can hardly be distinguished from that of McIntosh; the flesh is firmer but just as juicy. The apples do not drop so readily and ship better.

WAYNE (9b) Result of a cross of N. W. Greening x Red Spy introduced in 1962 by New York. It matures with Cortland, is of large size, and colored a solid scarlet-blush. Flesh texture and flavor very similar to Northern Spy. Trees bear early and annually, bloom late. Wayne is a first-class apple for sauce, frozen, and canned slice packs.

SMOKEHOUSE (10) Comes into bearing moderately young. It has a thin skin of yellow, striped with rather a dull red, and is very attractive. A favorite of the home orchard.

GARDEN SPOT COLLECTION

1 Lodi	1 Richared Delicious
1 All Red Jonathan	1 Colara Red York

All 4, 1 or 2 yr., 4 to 5-ft. Trees

(\$8.40 Value) for ONLY.....\$6.50

IMP. ALL RED JONATHAN (10a) This is a special bud-selected strain of the famous Jonathan apple. We have tested it in every section of the country, in trial plots and commercial orchards, for more than twenty years and have found it superior in most all cases. Highly colored Jonathan apples bring the fancy prices. Use this fine, proven red strain of Jonathan for replanting and new planting work. We are sure it will satisfy your needs.

GRIMES GOLDEN (10b) An apple of the highest quality. It is one of the fancy dessert apples and ranks with Delicious and Jonathan on the market. Medium to large, bright yellow; flesh fine grained, juicy, with a very pleasing spicy flavor. The tree is hardy, grows upright and is quite disease resistant. Highly recommended and widely planted to pollinate self-sterile varieties.

FRANKLIN (10c) The flesh is faintly yellow, fine grained. It is mild, moderately juicy, not quite as sweet as Delicious but with more character than McIntosh. Franklin excels both parents in appearance, having a brilliant red over-cover, resembling Delicious, with a golden yellow under-color with very distinct bloom. Fruits are medium to good size, oblong in shape. Franklin is notable for fresh dessert quality which is best from late October to early January. Blooms about with Delicious, Jonathan, Rome, ripening a week earlier than Delicious and a little later than Jonathan. It is a heavy annual bearer when properly pollinated.

IDARED (10d) A cross between Wagner and Jonathan. Its season is with or a little later than Jonathan. Fruits are medium to large. Stems medium long, slender; cavity broad, deep; calyx small, basin shallow. Strikingly beautiful bright red color. Skin smooth, medium thick, waxy; dots sparse, inconspicuous; rich yellow under-color. Fruits hold form as well as Rome when baking. Creamy white, smooth-textured flesh. Tree form resembles Jonathan, more upright, spreading, seems rather resistant to blight. A regular bearer.

JONADEL (10e) This variety is the result of a cross of Jonathan and Delicious. The fruit is larger than Jonathan, milder than Jonathan but more acid than Delicious. Color is equal to Jonathan. Dessert qualities are excellent. Jonadel ripens with Jonathan, keeps well in storage until March or April with no evidence of Jonathan spot or internal browning. Fruit tends to drop unless treated with NAA. The tree is less susceptible to fire blight than Jonathan.

JONAGRAM (10f) A cross of Ingram x Jonathan. The fruit is of medium size, roundish, with thick, tough skin that is pale yellow overlaid with red. The flesh is whiter than Jonathan, finely grained, juicy, crisp, tender. The apples keep well in storage. Jonagram matures with Jonathan but blooms late, about 12 days after Jonathan and Delicious, and six days after Golden Delicious and Rome Beauty.

(\$16.80 Value) for ONLY.....\$12.95

BOUNTIFUL IMPROVED WINESAP

✓ SPARTAN (10g) A very attractive McIntosh type ripening about a week later than McIntosh. Flesh is firm and dessert quality is good. Storage life is weeks longer than McIntosh. We recommend it for trial where a McIntosh type that can be picked later and stored longer is desired.

✓ TWENTY OUNCE (11) Fruit exceptionally large, juicy and crisp, sub-acid; color green, with slight blush and red stripe. Tree thrifty and very productive, generally recognized as our best summer baking apple.

✓ OPALESCENT (11a) Very large, brilliant dark red all over. Tree bears when young; very prolific. Average quality. Its size and beauty recommend it for planting in central and northern areas.

✓ PACIFIC GOLD (11b) Pacific Gold originated as a chance seedling in southwest Oregon and was introduced in the late 40's by J. E. Miller of California. The tree is moderate in size, with well-spaced, strong, wide-angled limbs. It bears when young and yields heavy crops annually. The fruit of Pacific Gold is large, with crisp, tender flesh, quite sweet, and of fine dessert quality. The skin is yellow, looking much like Yellow Delicious and Mutsu. The season is late fall or early winter. Pacific Gold keeps well in storage and should be tried in areas where russetting is a problem with Yellow Delicious.

✓ SPIGOLD (11c) A very high quality, dual-purpose apple from a cross of Red Spy x Golden Delicious. Matures about with Golden Delicious. Spigold has exceptional quality and should be an excellent home-garden variety.

✓ YELLOW DELICIOUS (12) This apple is famous for its unique quality, embracing a combination of flavors which is hard to equal. This, combined with the fine, firm-textured flesh of the apple and the beautiful golden yellow skin, at once attracts the eye of the consuming public. The tree, while not a large growing type, is thrifty and extremely productive, coming into fruiting and giving an abundant crop while very young.

✓ MACOUN (12a) Very highly colored, having no stripe. Same quality as McIntosh, same textured fruit, hangs to the tree better than McIntosh and ripens one to two weeks after Cortland. Tree about equal to McIntosh, a regular bearer, and strongly recommended to lengthen the McIntosh season.

EARLY RED STAYMAN (Neipling's)

✓ **MUTSU (12d)** A new Yellow Delicious type apple from Japan that is highly resistant to russeting. It has been widely tested in this country and is meeting with wide approval. Fruits are generally larger than Yellow Delicious and with coarser flesh. A possible replacement for Yellow Delicious because of its resistance to spray injury, late keeping qualities, vigorous growth of tree, and larger fruit.

✓ **EARLY RED STAYMAN (Neipling's) (13)** One of the Finest of the Stayman Sports. Colors 100% all over the apple, from 10 to 20 days before the regular Stayman. Growers can pick the entire crop at one picking, if desired, and avoid losses. Cold storage tests show it will keep through to following May and come out with less scald, more flavor and more snap than any other type Stayman. It's different—it's what you want—it has the natural full bright Stayman finish.

✓ **NORTHERN SPY (14a)** Large, roundish conical, often flattened, slightly ribbed; handsomely striped with red. Flavor rich, aromatic, mild sub-acid, fine. Keeps through winter and late into spring.

✓ **RED NORTHERN SPY (14b)** Red Spy is a typical Northern Spy except in color. The Red Spy colors a solid bright red without either stripes or splashes. If you desire more color in your Spy apples, plant the Red Northern Spy.

✓ **TURLEY (14c)** The trees resemble Stayman and are vigorous, rapid growers, productive and early bearing. The apples average large to very large; skin smooth, coloring a bright attractive red over the entire apple. Flesh is firm; quality is good but cannot be classed as a high dessert apple. The value of this apple lies in the fact that it will not crack under normal conditions.

✓ **COLORA RED YORK (15)** Earlier coloring, earlier picking, greater profits. The tree of Colora Red York has the same rugged characteristics as the old York Imperial, but will color 100% over the entire tree under most conditions. The Colora Red York can be picked from one to two weeks earlier than regular York. The entire crop can be picked at one time if desired. We do not know of any other type that will give the grower such attractive apples as the Colora Red York produces.

✓ **RICHARED DELICIOUS (12b)** The best of the red sports of Delicious. It has superb quality, beautiful bright red color without stripe, and excellent shape. Trees are hardy, vigorous, and produce large annual crops. Fruits of Richared are large, very handsome, and good. They ripen all over the tree weeks earlier than regular Delicious. Richared is your best bet for elevations over 100 feet. An excellent storage apple, too.

✓ **DOUBLE RED DELICIOUS (12c)** Another sport of Delicious that ripens with a stripe. It is your best bet for an early coloring Delicious at low elevations. When planted in areas over 100 feet, it tends to get too dark and is not as handsome as Richared. It bears young and produces large crops of fine, beautiful Delicious apples. Very similar to Starking.

Our Trees Are Inspected For Trueness-To-Name

PENNSYLVANIA TRUENESS-TO-NAME INSPECTION SERVICE

a service to nurserymen and fruit growers to promote trueness-to-name fruit varieties

SPONSORED BY THE STATE HORTICULTURE ASSOCIATION OF PENNSYLVANIA

C. M. RITTER

ROUTE 1, BOX 20
BOALSBURG, PENNA.

August 17, 1964

TO WHOM IT MAY CONCERN:

All saleable apple, pear, plum, sweet cherry, and sour cherry varieties propagated on standard seedling material and now growing at Bountiful Ridge Nurseries have been examined by the Pennsylvania Trueness-To-Name Inspection Service. To the best of our knowledge, these trees are true to name as they now stand in the nursery row.

FURTHER:

All saleable apple varieties propagated on clonal understocks and now growing at Bountiful Ridge Nurseries have been examined by the Pennsylvania Trueness-To-Name Inspection Service for trueness to name of rootstock, interstock if any, and variety. To the best of our knowledge all parts of these trees are true to name as they now stand in the nursery row.

C. Marshall Ritter

RED YORKING (15a) Another red sport of York Imperial that has merit. We offer this variety to our customers who have experienced more success with Red Yorking than Colora Red York because of site conditions, etc.

MELROSE (15b) A new late-keeping winter apple that is a cross of Jonathan and Delicious. Tree blooms later than either parent. Fruits ripen just before Stayman, keep well in cold storage until April, and so far have proven free of Jonathan spot.

Fruits are well covered with an attractive carmine and have a live yellow undertone. Fruits larger than Jonathan—firm, crisp, juicy, not as tart as Jonathan or as sweet as Delicious. Excellent cooking and dessert quality.

Tree bears moderately young, is upright, spreading, with good crotch angles, and develops to a reasonably large size.

DOUBLE RED STAYMAN—201 Type (16) One of the newer introductions which has found favor with some growers. Trees and fruit characteristics similar to Blaxtayan except that it has a more brilliant color which lays on earlier and does not get the dark shade often found in some Stayman types. Our observations show this type to compare very much with our Early Red Stayman.

RUBY A promising late-keeping apple resulting from a cross between Gallia Beauty and Starking. Ruby has great eye appeal because of its striking, brilliant over-all carmine-red. The tree resembles Rome in growth, bears early and tends to produce annually. Blooms about with Rome and Gallia and just after Delicious. Picking date is about with Rome or just before Stayman. As a dessert apple the flavor is good, surpassing that of Rome Beauty. It is somewhat juicy, neither sharp nor sweet but pleasingly mild; cooking does not detract from the flavor but seems to improve it; whether baked or stewed, the flesh has tendency to hold its shape well. Fruits hold well in storage into April and May, being less susceptible to scald than Rome Beauty.

KING LUSCIOUS (16b) See page 18 for full description. Color photo on inside back cover.

WINTER BANANA (17) Vigorous grower; early bearer. Fruit medium to large, smooth and handsome golden yellow, usually shaded with red blush. Flesh fine grained, rich sub-acid, aromatic; highest quality.

BALDWIN (17a) Buds were selected from one of the finest producing Baldwin trees ever observed. No type yields larger crops, bears shipment better or is more attractive in color, size and shape than the Collier Baldwin. It is esteemed as an eating apple and for cooking.

GALLIA BEAUTY—Red Rome (18) Originated in Ohio and is a typical Rome type tree, being thrifty, hardy, and productive. The fruit of the Gallia Beauty colors a brilliant bright red, without stripe, and seems to be of higher quality than the regular Rome Beauty and keeps exceptionally well in storage. The Gallia Beauty will size up equal to the regular Rome, but many of the other inferior, so-called Red Rome types, will not size up satisfactorily. Again we urge you to plant only the Genuine Gallia Beauty. We offer you the best, and charge you no more.

JERSEY RED (18a) A cross of Gallia Beauty and White Winter Pearmain. Fruits are large round-oblately and color a deep attractive red. Very firm and late keeping as Rome. Holds to tree exceptionally well. The tree is very vigorous, with large heavy foliage resistant to blight and breakdown. Fruit seems a little better quality than most Roman types.

ROME BEAUTY (18b) Keeps in good condition till May and June. Large, round, mottled and striped to handsome shades of red; flavor and quality way above the average. Appearance and size are its valuable points; always sells and always brings good prices.

RED ROME—No. 262 Type (18c) This type Red Rome comes to us from the far West and has been planted widely in the Appalachian fruit area. Its merits over Gallia Beauty are questionable, but some growers like it better.

CRANDALL (18d) A cross between Rome Beauty and Jonathan. Tree is a moderately vigorous, heavy annual bearer. Lateral branches form wide angles. Foliage is not susceptible to apple scab. The tough skin, moderately thick, develops heavy wax when in storage. The flesh is yellowish white, firm but fine grained, crisp and juicy. The flavor is mild sub-acid, aromatic, very good to excellent quality as dessert and cooked. Does not spot as Jonathan.

BOUNTIFUL IMPROVED WINESAP (19) A glorified selection of the famous Winesap with the same beautiful color—same quality—same keeping ability. Found years ago in the orchard of The Consolidated Orchard Co. of Paw Paw, W. Va. This strain produces heavy annual crops of fruit that, very often, is as large as Stayman. The fruit has every characteristic of the Old Virginia Winesap in shape, color, quality, and growth habits. The tree is typical Winesap, including leaf markings. Bountiful Strain Imp. Winesap has become a favorite with orchardists for local and long-distance sales. Especially popular as an extra long keeping variety for use in polyethylene bags.

GALLIA BEAUTY

Dwarf Apple Trees by Bountiful Ridge

. . . . *THEY SATISFY*

**LOWER PRODUCTION COSTS - SMALL TREES AT MATURITY
LARGE SIZE FRUIT - GOOD QUALITY - QUICK TO BEAR**

Mutsu

Ruby
Red Warrior
Melrose
King Luscious
Richared Delicious
Yellow Transparent
Yellow Delicious
Williams Early Red

The ideal stock for small, semi-dwarf trees, cordons and espaliers. Does particularly well on heavy clay soils. It has proven to be very hardy and has a good root system which makes a well anchored medium for small trees. Seems to grow vigorously in its early years but soon settles down to slower growth and heavy cropping. Generally recognized to be one of the best understocks for commercial planting as well as the home fruit grower.

VARIETIES ON EAST MALLING NO. 2 ROOTSTOCK

Recommended for orchard planting in many areas—Good root system, grower and producer

Slightly larger than trees on No. 7 stock.

Gallia Beauty
Early Red Stayman (Neiplings)

All Red McIntosh
All Red Jonathan
Mutsu

Skyline Supreme
Yellow Delicious

A good medium-vigorous stock with a good root system. Though this stock makes a larger tree than E. M. 9 or 7, it does have the early bearing characteristic of them. Trees behave well on most soils and are being used quite extensively in commercial planting. The stock has been found resistant to crown rot.

PLEASE NOTE: We recommend trees on East Malling 9 be planted 12 to 16 feet apart while those on East 7, 2, be planted 15 to 25 feet apart, Malling-Merton distances should be the same as for the East Malling

stocks with which they most nearly compare. Trees with anchor root systems should be planted slightly farther apart than those with only East Malling or Malling-Merton root systems.

DWARF APPLES WITH MALLING-MERTON ROOTSTOCKS

WOOLLY APHID RESISTANT . . . HEAVY AND EARLY BEARING

Our supply of trees on these new rootstocks is very limited for this season.

M. M. 104—Semi-Dwarf . . . Tree about the same size as E. M. 7 on sand; a little larger on loam. Good root system for anchorage, early heavy crop, resistance to crown rot recommends it.

Yellow Delicious
Skyline Supreme

Double Red Delicious
All Red McIntosh

Early Red Stayman (Neiplings)

M. M. 106—Semi-Dwarf . . . Identical to E. M. 7 on loam but somewhat smaller on sand. Valuable for sites where E. M. 9 makes a small tree.

Yellow Delicious
Skyline Supreme

All Red McIntosh
All Red Jonathan

Early Red Stayman (Neiplings)
Richared

M. M. 109—Vigorous . . . Quite similar to E. M. 2 under most conditions. Seems to withstand drought better than E. M. 2.

Yellow Delicious
Skyline Supreme

Double Red Delicious
All Red McIntosh

Double Red Stayman 201

M. M. 111—Vigorous . . . Trees about same size as E. M. 2 but bear heavier. Gives largest yields without increasing tree area.

GET ADDED DIVIDENDS WITH BOUNTIFUL RIDGE DWARFS: We are now using a short anchor root of standard apple seedlings at the base of most of our dwarf trees. This anchor system is all under ground; the Malling piece is rooted, too. The variety is budded to the Malling stock 6 to 8 inches above the ground to

cause the dwarf effect. We have been doing this type of work for many years and the results have been very satisfactory. The use of the anchor root thus gives a strong root system to an otherwise poorly rooted tree and makes it more readily adaptable to ordinary home and orchard planting.

**ALL BOUNTIFUL RIDGE DWARF APPLE TREES ARE MARKED AT PROPER PLANTING DEPTH
DO NOT SET DEEPER THAN THE WHITE PAINT MARK**

Dwarf Fruit Trees for the Home Gardener

FULL-SIZED FRUIT FROM VERY SMALL TREES - PICK AND SPRAY ALL FRUIT FROM GROUND
EASIEST OF ALL TO CARE FOR

Dwarf Peaches

Can you imagine having your own beautiful, luscious fruit on your own peach tree, right in your back yard. These trees are small: never more than 7-8 feet tall, easy to spray, easy to prune. They bear heavy crops of large sized peaches, beginning in the second or third year and continuing for many years. All varieties listed are self-fertile and need no cross-pollination. Full descriptions of these varieties can be found in the general peach section.

HANSEN'S BUSH CHERRY

Selected Hansen Bush Cherry has fruits resembling Montmorency only not as large. The fruits are edible and make fine pies. A True Dwarf Plant seldom attains a height of more than 3 ft. Blooms early spring, giving beauty as a shrub plant. Branches are almost covered with attractive red cherries of good size.

AN ESPALIERED DWARF RED DELICIOUS

Dwarf Nectarines

Trees look just like peaches, yet produce beautiful, luscious plum-like fruit so flavorful. Nectarines have long been a favorite with home owners but they presented a large maintenance problem. Now . . . Dwarf Nectarines take the same care as any other dwarf fruit. Enjoy the superb quality found only in nectarines by planting them this season.

GARDEN STATE (yellow)	REDCHIEF (white)
Dwarf Nectarines Same Price as Dwarf Peach	

Dwarf Cherries

"NEW NORTH STAR"

Our Finest Dwarf Pie Cherry

Literally thousands of bright, shiny, mouth-watering fruits from these small trees each year will be yours. North Star trees bear early, and heavy beginning the second and third year. This variety is the most hardy sour cherry we have and will succeed farther north than any other cherry. It ripens along with Montmorency and Morello. Fruit hangs for about two weeks in normal seasons.

Dwarf Plums

Beautiful Flowers—Delicious Fruit

Just about all one could expect from any tree. These very small plum trees make a fine addition to any home garden. Dwarf plums can be cared for the same as peaches, grow most anywhere, and can always be reached from the ground. Plant them 6 to 8 feet apart for wonderful results.

Fellenberg	Satsuma
Santa Rosa	Shiro
Stanley	

Dwarf Apricots

Enjoy these taste tempting, luscious fruits right from your own back yard every year. These are small trees that can be planted close together, about 6 to 8 feet, and a ladder is never needed for pruning or harvesting. Apricots do well wherever peaches are grown.

PLEASE ADD POSTAGE

PARCEL POST SHIPMENTS —

Our low prices, high quality stock, and careful packaging will not allow us to pay postage on your order. Also, we have never thought it proper to overcharge some customers so others could benefit. We charge each customer ONLY the exact amount needed to deliver his order.

Please add 50¢ for postage for orders less than \$5.00, and 10% for larger orders. (I.E. for a \$9.50 order, send 95¢). Shipments west of the Mississippi River, send 75¢ minimum and 15% for large orders. In any case, we will refund any overage sent to us or bill you for any additional at time of shipment.

We hope this guide will be of help to you when placing an order. Certainly, distance and the type of plants in your order will cause this formula to vary. Be assured, however, that your order will be sent in the most economical way.

EXPRESS SHIPMENTS —

Post-shipment regulations will not allow us to ship plants more than 5 ft. in length. If a package exceeds this size, we will send it express collect for the charges and refund any postage you have sent. Under such conditions several trees deliver as cheaply as one. NOTE: Should any express shipment arrive in a damaged condition, inspect the package with your express agent and file a joint inspection report. Send a copy of this report to us at once so proper claim may be filed and plants re-

INSURANCE —

All parcel post shipments are commercially insured for your protection. We can guarantee safe arrival of all nursery stock you order in this way. Just add 10¢ to any parcel post size order for this service. Insurance costs, included in R&A Express charges, protect you against loss on larger shipments.

SALES TAX —

Any Sales Tax which may be imposed on nursery stock by your State or Federal authority should be added to the amount of your order. You will be advised of any changes or additions which may be made on your order acknowledgment.

MISTAKES

BEFORE SHIPMENT — Carefully go over your order before posting it. Be sure you have given all necessary information. Upon receipt of your acknowledgment, check again to be sure it is the same as your order. If you find some error, notify us at once so we may correct it before shipping time.

AFTER SHIPMENT — Be sure to note any shortages or errors and advise us as soon after receiving the order as possible. Return your invoice with your correspondence for faster service.

TRUE-TO-NAME — We use every precaution to have our plants true to name. Should any of our plants prove otherwise, it will be our option to replace the plants as ordered or to refund the purchase price of the plants. Further than this, we are not responsible.

TIME TO ORDER — Send your order soon as possible after receiving your catalog. Avoid late season disappointments, reserve your trees for delivery at proper planting time. We do our best to deliver plants at your request, but weather conditions during the digging and shipping season often cause delay. We ask your indulgence at such times and remind you that all stock you buy from Bountiful Ridge is guaranteed to arrive in good condition.

REMITTANCE — Payment in full should accompany all orders. Large orders, where satisfactory reference is given, should have 1/2 down with the balance paid at shipping time. Our prices are net, F.O.B. Finches Anyo, Md. Delivery price and quantity of plants desired. Prices in this catalog are for Fall 1964 and Spring 1965 and will be in effect until a new catalog is issued.

SHIPPING SEASON — From October 15th to May 15th. Many items from refrigerated storage may be shipped later than May 15th with success. Depending on weather conditions, the fall season may begin until November 1st or later. We will not ship plants that are not dormant during the fall season.

ORIENTAL PERSIMMONS

EXTREMELY BEAUTIFUL—HIGHLY DELICIOUS

ATOMA Tree of this new hardy type is strong, vigorous in growth and a good bearer. The fruit is large, oblate with well defined quarter marks, skin orange-yellow changing to dark orange with a delicate bloom and waxy appearance; light clear flesh when ripe. Loses its astringency when ripe and of high quality. Hangs well.

FUYUGAKI Fruit of this variety is never astringent. It is edible while still hard and may be peeled and eaten like an apple. It keeps well and quality is of the best. Fruits are medium in size, rather flattened, beautiful deep red color, and a very prolific bearer.

HYAKUME The Hyakume persimmon is a large fruit of the black meat type. The tree normally grows to a height of about 10 feet producing a medium quantity of fruit of high sugar content. It is beautifully ornamental.

EUREKA A hardy variety with a most delicious flavor. Sometimes seedless. Big red-orange fruits literally cover the tree and hang until soft and ripe. Slick, dark-green foliage adds to the ornamental value of this type grafted persimmon.

TANE-NASHI Large to very large, conical in shape. Light yellow changing to red as the fruit ripens. Flesh is astringent until fully ripe when it acquires a delightful flavor that is characteristic of the fruit.

Prices For All Persimmons:

3 to 4 foot branched, \$3.25 each; 3 for \$8.95
2 to 3 foot branched, \$2.75 each; 3 for \$6.75

Oriental Persimmons are one of the finest ornamental plants we know. They have beautiful, waxy green foliage through the summer which changes to rich, golden yellow streaked with red in fall. The trees are rather slow growers which makes them popular for small homesites. Tree characteristics of Oriental Persimmons are outstanding enough to merit space in any planting. Delicious fruit is an added bonus.

The Oriental persimmon is adapted to most regions in the South and can be raised successfully as far North as Penna. The trees are vigorous of growth and bear young.

Varieties listed in order of ripening

✓ **MANNING'S ELIZABETH** (1) A good summer pear for home use or near-by markets. The fruits have an attractive appearance and a distinctive flavor. Trees are hardy, vigorous, productive, and bear annually. This fine old variety is blight resistant when good cultural practices are followed.

✓ **DOUGLAS** (7) An early-bearing, blight-resistant variety that is hardy and very productive. Healthy young trees, which often bear in their third season, produce large fruits handsomely covered with a red blush and smooth finish.

✓ **CLAPP'S FAVORITE** (2) A large, fine pear that resembles Bartlett except that it is much longer. Fruits are colored a pale lemon-yellow with brown dots. They have fine texture; are melting, buttery, juicy, and delicately flavored. Trees are hardy and productive.

✓ **DAWN** (3) Dawn is picking mature about two weeks earlier than Bartlett. Fruit generally resembles Bartlett but the skin is smoother. The fruit is very good in quality, sweet, spicy, and very juicy. It ripens in 12 to 14 days when held at 70 degrees, and is almost free of grit cells.

Trees of Dawn are moderately vigorous, upright in growth, and bear on short terminals. They are susceptible to fire blight and should be grown only where Bartlett is grown successfully. Flowers contain only a moderate amount of pollen.

✓ **MOONGLOW** (3a) A large, early-ripening pear which is promising for processing and market use. It is picking mature from 10 days to two weeks ahead of Bartlett and will ripen to prime eating quality 15 to 18 days later. Fruits are attractive, nearly free of grit cells, rather soft and moderately juicy. Flavor is rated as good.

Trees of Moonglow are vigorous, very upright, heavily spurred, and bear early. Abundant pollen is present. Moonglow is very resistant to fire blight. Never have we seen cankers of this disease enter older wood. This has been a most popular variety to date, and we expect demand to continue. Order trees early for this promising new pear.

✓ **SECKEL** (12a) A small, rich yellowish brown pear that is one of the best flavored ones known. Seckel is very productive, somewhat blight resistant, and easy to grow. It is the all-time favorite for home planting.

✓ **FLEMISH BEAUTY** (4) A large, juicy, melting and rich variety that doubles as an excellent pollinator. Trees are hardy, strong growers, and good bearers; they prefer sunny locations.

✓ **BARTLETT** (5) The standard by which all other pears are judged. It has large size, golden yellow color, and tremendous quality. It is equally popular on the fresh market and with the processors. Fruits are buttery, very juicy, and highly flavored. Trees are strong growers, bear early and abundantly. Bartlett is moderately susceptible to fire blight and should be planted where this disease is not too severe.

IMPROVED BARTLETT (6) A "local find" that is similar in growth habit and fruit to regular Bartlett. It bears young and heavily, with well-shaped and flavorful fruits. Most important is that this fine variety has had pear blight only once in all the years we have grown it. Then, the blight was purposely induced by overfeeding, and the cankers did not go beyond the soft new wood. Our tree recovered nicely and is continuing to produce fine crops. We think this is a fine new variety and want you to try it, but we cannot guarantee it blight-proof because growing conditions, tree vigor, and planting site could alter its fine record.

RIPENING INFORMATION Most all pears should be picked before actually ripe and put in a cool (60 to 70 degree), shaded, or dark place to finish ripening. They will be sweeter, more juicy and eye-appealing.

DEVOE (8) A real good variety that is popular and profitable, especially in eastern pear-growing areas. Found in New York's Hudson Valley as a chance seedling. Devoe most nearly resembles Beurre Bosc in shape. It has a rich appearance, large size, and delicious flavor. Devoe brings highest prices on fresh markets everywhere and is excellent canned.

Fruits are borne in profusion at an early age on very vigorous and strong trees. A golden yellow color, highlighted with a pretty red cheek, covers the long fruits as harvest time approaches. The flesh is firm, white, lacking in grit cells, juicy and sweet. When picked at proper stage of maturity, Devoe will keep well in cold storage until January and later. Proper picking time is about a week later than Bartlett.

The tree is upright in habit; wood is whippy and bears a good fruit load without breakage. It is very resistant to pear psylla.

Devoe is a good **Blight-Resistant** variety. However, **Blight Resistance** in no way implies that the variety will be completely free of fire blight, regardless of the cultural practices used. Devoe is a fine, vigorous grower and needs little fertilization, no constant cultivation or extensive pruning for good results. Most successful pear operations involve little pruning, low nitrogen levels, and little cultivation. When treated in a like manner, Devoe will prove highly satisfactory. We recommend this fine variety for all pear-growing areas.

MAGNESS (8a) A very blight-resistant, new variety that is picking mature about a week later than Bartlett. The fruit is lightly covered with russet, medium in size, and generally oval in shape. The flesh is soft, very juicy, almost free of grit cells, sweet, highly perfumed, and aromatic. The skin is tough and resists insect injury. Magness can be held up to three months in cold storage and ripen with good quality.

Trees are very vigorous, spreading, and sometimes thorny. They begin bearing at about six years. Magness is entirely pollen-sterile and must be pollinated with some other variety for good set. Blight resistance is extremely high. Cankers of this disease have never spread into two-year wood, even when the disease was purposely induced. Magness is a good variety for trial in all areas.

ANJOU—Beurre d'Anjou (9) A large, fine pear that is buttery and melting, with a sprightly flavor. The tree is a fine grower, very productive, and an early bearer; one of our best varieties for the home and orchard trade. Anjou is partially resistant to fire blight.

BEURRE BOSCH (10) A large pear colored a dark, rich yellow overspread with a cinnamon russet. Flesh is white, rich, tender, very juicy, and with pleasing aroma. Quality is very good, Seckel alone surpassing it as a dessert fruit. Trees are slow growers and do not bear at an early age, but are large and most productive at maturity. They are blight susceptible.

BLIGHT-RESISTANT ROOTSTOCK

OLD HOME Proven highly resistant to blight everywhere and recommended as an intermediate stock or understock for pear varieties subject to blight or pear decline. Since we do not grow varieties on Old Home, we suggest that you plant Old Home trees in your orchard and graft them to the varieties you desire.

MAGNESS

DUCHESSE D'ANGOULEME (11) A very large, greenish yellow pear that is the favorite of many home gardeners. Trees grow equally well on standard or dwarf roots, making beautifully symmetrical trees that bear early and annual crops of fine fruits. Fruits are buttery, melting, and of fine flavor.

WORDEN SECKEL (12) A Seckel type pear that is larger and more handsome than Seckel. Fruits are smooth, glossy, uniform, with a good blushed cheek on a handsome yellow background. They keep longer than Seckel. A hardy tree that bears when young.

EWART (13) The tree is a willowy grower but quite resistant to blight. It bears while young, and annually. The fruit is large sized, of high quality and good appearance. The skin is covered with golden yellow, finely netted with russet. Ripening season is about three weeks later than Bartlett.

ORIENT (14) A good blight-resistant variety for southern growers. The trees are large, vigorous, productive, and require little pruning. Fruit is firm, juicy, slightly sweet, and nearly round. Its creamy white flesh has good texture and cans well.

KIEFFER (15) Grown in all sections of the United States and Canada, the tree is practically immune to blight, very thrifty in growth, and bears consistently heavy crops. Fruits are large, colored golden yellow, juicy, often gritty, and of poor quality for fresh use. They are quite good for culinary purposes, however, and keep well into the winter.

HELPFUL HINT: Most pear varieties are self-unfruitful and should be interplanted with other varieties. Seckel and Bartlett will not cross-pollinate each other and where these two varieties are being planted, another variety should be added. Duchesse and Flemish Beauty have the best pollen of those we list and are good pollinating varieties. Detailed information will be sent upon request.

NUT TREES

HARDY NORTHERN GRAFTED PECANS

- ✓ **BUSSERON** originated in Indiana. Trees vigorous; self-fruitful; nuts large for northern varieties. Nuts are long; shell medium thick; fair cracker. Flavor good and very sweet.
- ✓ **MAJOR** This is perhaps one of the best of the northern pecans, for growth, disease resistance and regular bearing. Very high quality nut, thin shell, small, plump, sweet. A splendid tree, starts bearing the 3rd or 4th year after transplanting.
- ✓ **GILES** This pecan is somewhat larger than the Major and bears very heavy crops, usually starts bearing the 3rd or 4th year after transplanting. Tree more spreading than the Major, is disease resistant, very fine flavored nut.
- ✓ **COLBY** This fine new variety originated in Illinois and was introduced commercially in 1957. It is a northern type nut maturing in 160 days and has proven very hardy in the Illinois area. The nut is long, oval, and of good flavor. It excels other extra early types in both size and productivity.

2 to 3 feet, \$4.95 each
3 to 4 feet, \$5.95 each
4 to 5 feet, \$6.95 each

HICAN TREES

Pecan X Shellbark Hickory Hybrids

- ✓ **CLARKSVILLE** Trees grow with great vigor, symmetry and beauty. Foliage is dark green, makes a beautiful ornamental tree as well as producing large high quality nuts which are thin shelled and fine flavored. Trees are hardy in Northern areas.
- ✓ **GERARDI** Tree grows very much like the Clarksville and is hardy in Northern areas. Nuts are often 2 inches long and about $\frac{3}{4}$ of an inch in diameter and very fine flavored with good cracking qualities.
- ✓ **PLEAS HYBRID** is hybrid of pecan and bitternut hickory from Oklahoma. Tree is moderately strong growing; round-headed; a fairly early and moderate bearer. Nuts medium in size, fair cracker. A fine Timber and Ornamental Tree.

Grafted Hican Trees, 3 to 4 feet, \$5.95 each
2 to 3 feet, \$4.95 each

HARDY CARPATHIAN WALNUT

GRAFTED PAPER SHELL PECANS

(Southern Types)

- ✓ **STUART PECAN** Extremely hardy and a strong grower. Nuts of good size and well filled. Shell very thin and easily opened.
- ✓ **SCHLEY PECAN** The Schley is thrifty, strong grower; nuts long, well filled, with a very thin paper-like shell.
- ✓ **FARLEY** We list this selection with the assurance that it is self-pollinating and more hardy than most varieties, and seems to adapt to varied soil and climatic conditions from the far South to the Central Northern area.

✓ **DESIRABLE** The Desirable is another selection which has been much recommended as a very productive and comparatively hardy self-pollinating variety suitable for home and commercial planting. We feel that the Farley and Desirable both are very desirable additions to the older established varieties of thin shelled pecans.

✓ **ELLIOTT** A new scab resistant variety that is becoming a favorite with many. Nuts are thin shelled, of excellent quality, and shell-out with a high percentage of halves. Be the first in your area to try this new pecan.

	Each	3	10	20
2-3'	\$3.75	\$10.80	\$35.00	\$68.00
3-4'	3.95	11.40	37.00	72.00
4-5'	4.45	12.95	42.00	82.00

NEW . . . HARDY GRAFTED CARPATHIANS

- ✓ **COLBY** One of the hardiest varieties for the mid-west and middle Atlantic areas. This medium sized nut is thin shelled, cracks out in halves, has light meat, good flavor and quality.
- ✓ **LAKE** This is one of the largest Carpathians having good quality, fine flavor. It cracks out in halves and has proven its hardness in the mid-west and middle Atlantic areas over the last ten years.

2 to 3 feet, \$4.95 each
3 to 4 feet, \$5.95 each

ENGLISH WALNUTS

Very Hardy Types—Large, Thin Shelled

English Walnut production is proving practical and desirable in the East Central areas. Tree valuable for its fruit and shade. The nuts are thin shelled with fully meated kernels of delicious flavor. Tree is hardy and productive.

2 to 3 feet, \$2.95 each; 3 for \$8.50
3 to 4 feet, \$3.95 each; 3 for \$11.50

HARDY CARPATHIAN WALNUT SEEDLINGS

2 to 3 feet only, \$2.95

THOMAS BLACK WALNUTS

(Grafted For Your Insurance)

One of the largest and finest Black Walnuts yet found. Kernels large, light colored; nearly all crack out in whole halves. Tree extremely vigorous and hardy.

2 to 3 ft., \$2.95 each; 3 for \$8.50
3 to 4 ft., \$3.65 each; 3 for \$10.50

HALL'S HARDY ALMOND

New—Beautiful—Delicious

A fine new plant with beautiful blooms and delicious nuts. Hall's Almond thrives where peaches are grown, growing rapidly and bearing heavy at an early age. It is a fine dual purpose plant and can be added to most landscape plantings with ease. Both results are obtained when two or more trees are used.

4 to 5 ft., \$2.95 each; 2 for \$5.50
3 to 4 ft., \$2.50 each; 2 for \$4.50

SHAGBARK HICKORY

(Seedlings)

Beautiful trees for shade, home, or orchard planting. Shagbarks thrive on marginal soils and are adapted to growing from north Florida to New England and west. Nuts are creamy-white, sweet, hard but thin-shelled. Trees are somewhat slow growers, but exceptionally durable.

18 to 24 inch plants, \$2.95 2 to 3 ft., \$3.95

HEARTNUT

(Varietal form of the Japan Walnut)

Our selection is a seedling of the well known Canoka, which is one of the most rapid growers of all nut trees, bears young, often the third year. Bears annual crops, cracks easily, the kernels coming out mostly in whole halves.

2 to 3 ft., \$2.50 each 3 to 4 ft., \$3.50 each

Chinese CHESTNUTS

Early Bearing, Fast Growing, Blight Resistant Trees

We highly recommend planting Chinese Chestnuts on hillsides, in pastures, on roadsides, in barnyards, in lawns, and in areas where general farming operations fail because of topographical conditions for beauty, shade and delicious nuts. Blight resistant Chinese Chestnut trees will thrive on most any site which will support other tree vegetation.

Chinese Chestnuts are early to bear and give quick profits. Many growers are now receiving fifty to ninety cents per pound for their nuts. Others with only a few trees are supplying their own needs with ease. You, too, can enjoy them with a minimum of expense and care. Write for our up-to-date cultural directions on **BLIGHT RESISTANT CHINESE CHESTNUTS**.

THOMAS BLACK WALNUT

FILBERTS

ROYAL This fine new filbert bears large, glossy, well filled nuts in profusion. It needs pollination from either Barcelona or DuChilly for best results. Recommended for trial where other filberts are grown successfully.

BARCELONA FILBERT Possibly the most widely planted type for commercial plantings in the Northwest. Larger than the native filbert, heavy and consistent bearer.

DuCHILLY FILBERT Widely used to pollinate other types. Nuts are large and attractive.

	Each	3
2 to 3 ft.	\$2.95	\$7.95

AMERICAN FILBERT (Hazel Nut)

The family favorite, attractive bush, yielding abundant crops. Bears young. Does not grow a large tree.

2 to 3 ft., \$1.95 each; 3 for \$4.95

JAPAN WALNUT

Valuable as a shade tree. Nut has comparative thin shell. Kernel flavor similar to white walnut. Used largely as a pollinizer for English Walnuts. Our Japan walnut is a very selected type.

2 to 3 ft., \$1.95 each 3 to 4 ft., \$2.35 each

Enjoy Scenic Del-Mar-Va on your way to Bountiful Ridge

We believe a visit to our nursery will be a real treat. You will find us 3 miles west of Princess Anne on Route 363. The offices and Sales Yard are open each weekday from 8 to 5 and until 4 P. M. on Saturday. If you should like to schedule your visit at another time, please call for an appointment. Our phone number is Princess Anne, Md.—1104; Area Code is 301. After January 1st, it will be 301-651-0400.

BOUNTIFUL RIDGE GARDEN CENTER

This is another newly opened part of our business. You will find a most varied line of the finest in ornamental products here, as well as most of the necessary tools and equipment for gardening. Our landscape department will be glad to discuss your individual needs and help plan your homesite for beauty and utility.

OUR GARDEN CENTER FEATURE SECTION

Many of you will see something new and very different about our catalog this year. We have added a center section which deals only with ornamental plants and fixtures. In it, you will find many of the hard-to-get items which are so necessary in successful gardening. We will ship any of the stock you may wish to order from this new section; but transportation costs may be quite high on some of the larger plants.

Our GARDEN CENTER FEATURE SECTION will allow many of you to shop from an "honest-to-goodness" Garden Center for the first time. We think you will like it. If this special section has not been included in your catalog, write to us and we will gladly send you one by return mail. Better yet, why not stop in to see us and look over our extensive line of quality plants and supplies.

RA-PID-GRO

RA-PID-GRO is an approved formula containing Nitrogen 23%—Phosphoric Acid 21%—Potash 17% in combination with Vitamin B₁ and B₂ along with other elements necessary for normal plant growth.

RA-PID-GRO is shipped in dry form and water is added by the user to make one of the finest plant foods which can be purchased. One pound of RA-PID-GRO makes 22 gallons of the quickest acting fertilizer ever used for dipping stock when planting and putting around all plant growth. Makes 44 gallons of liquid for spraying on foliage. It will not burn when applied as a spray. It is 100% effective as it contains no inert material.

Follow full directions included with every shipment for best results.

PRATT'S FRUIT TREE-SPRAY OR DUST

A combined insecticide and fungicide containing 62% sulfur, 7.50% DDT, 14.40% basic lead arsenate. Used for the control of majority of insects and fungous diseases on apples, pears, peaches, plums and ornamentals. An all-purpose dust or spray for fruit trees whereby it is possible to control chewing insects and fungous diseases with a single material. May be used as dust or diluted with water for spraying. 1 lb. makes 8 gallons spray.

1 lb. \$1.00; 3 lbs. \$2.50. Not Postpaid

PRATT'S SCALECIDE

The oldest and best known dormant oil spray for fruit trees, shade trees, and ornamentals. A 96% highly refined miscible oil meeting state specifications for superior type oil. Dormant spraying with Scalecide at half the concentration required for regular oil gives safe, effective control of scale, aphid, red mite, spruce gall, red spider and similar over-wintering insects. For orchard spraying and egg type of scale use 3 gallons per 100, for shade trees 2 gallons and evergreens 1 gallon. 1 qt. \$1.49; 1 gal. \$3.50. Not Postpaid

FIG TREES

HEALTHY—EASY TO GROW—DELICIOUS

BROWN TURKEY Very hardy, dwarfish and prolific. Fruit medium size to large, pear shaped, skin copper brown, flesh white shading to pink, quality good.

MAGNOLIA FIG One of the hardiest species, doing well where the winters are not too severe. Fruit very large and of rich straw color. Fruit begins to ripen the last of June.

Prices on all Fig Varieties:

18 to 24 inch, \$1.85 ea.; lots of 3, \$1.75 ea.
2 to 3 feet, \$2.15 ea.; lots of 3, \$1.95 ea.

EVERBEARING TYPE Characteristics similar to the Brown Turkey, otherwise it starts to bear early in the season and continues to bear fruit into late fall. This variety is very attractive as to bush and is used much for ornamental purposes.

CELESTE Most widely planted of all figs in the south-eastern fig areas. It is hardy and can be grown where less hardy varieties fail. Fruit is medium in size, skin violet, flesh white to rose color, firm, juicy, sweet and of excellent quality.

← Japanese Fan Tail Willow

(*Salix sachalinense* Sekka)

This is a strange, Japanese-y plant that's straight from the Orient and as crooked as can be . . . the willow that doesn't know which way it ought to grow. It will be the most talked about plant in your garden. A medium spreading shrub that's fluffy with soft, silvery catkins in the spring, and attractive all summer dressed in long, narrow, shiny, green leaves, this mad willow in the fall becomes a home decorator's delight. It is then, when the branches are fully ripened, that their odd twistings and turnings provide for even the inexperienced arranger the most art of Japanese-style decorations. Sometimes the branches are flat and an inch or so wide, sometimes they're round—always they grow in the most unexpected direction; and they grow that way *naturally*—without the aid of human hands. Spring, summer and fall in the garden—and all winter in the house—you'll appreciate the unusual beauty of this mysterious, odd-ball plant . . . *Salix sachalinense* Sekka.

Heavy 2-yr. field grown plants, 15 to 18 inches: \$2.95.

The RARE FRANKLINIA →

Beautiful blooms and blazing fall foliage bring beauty to any planting. Flowers start opening in Mid-August and continue to open until hard frosts. The young leaves are 5 to 6 inches long by about one-third as wide, a rich dark green with red veining. In Autumn the whole tree blazes a rich warm color. Produces a beautiful effect in any ornamental planting.

12 to 18 inch \$2.95 each
18 to 24 inch \$3.95 each
2 to 3 feet \$4.95 each

THE WILD ROSE LIVING FENCE

(*ROSA MULTIFLORA JAPONICA*)

Needs Little Pruning — Disease Free — A Living Fence For Years To Come.

Multiflora Roses are being used effectively to decrease soil erosion, dividing line fences, wind breaks, screens for unsightly objects, to confine farm animals and as snow fences in winter.

The plants grow rapidly in most all types of soil and produce a fence up to eight feet in height in three to four years, then it stops, getting no taller. The fence needs no pruning or care after the initial setting.

Where a close hedge or screen is desired, we suggest planting one foot apart. For more open hedge they may be planted two or three feet apart in a single row.

The fence is a beautiful sight in bloom putting on a gorgeous display for about two weeks. Thereafter seed pods are formed to furnish food for the birds.

Prices of *ROSA MULTIFLORA*

	25	50	100	500
Jumbo, 18" up	\$9.00	\$13.50	\$20.25	\$58.50
Strong, 12-18"	6.00	9.00	13.50	39.00
Light, 6-12"	3.00	4.50	6.75	19.50

PINK DOGWOOD (*Cornus florida rubra*)

A colored form of the native species Dogwood. It has the same habit of growth, period of bloom, and general behavior. Pink dogwoods are adapted to most of the central and northern areas and are a beautiful addition to any garden. They have bright deep rose colored blossoms which come in the early spring and last about two weeks. The foliage is a nice green which becomes a handsome red in the fall.

Prices listed are for thrifty, bare root plants; 3 to 4-ft. plants and up are budded and ready to bloom.

	Each	3	10
18 to 24 in.	\$2.75	\$ 7.50	\$22.50
2 to 3 ft.	3.50	9.75	30.00
3 to 4 ft.	4.50	12.75	40.00
4 to 5 ft.	6.00	17.25	55.00

Flowering Cherries

Upright Types

KWANZAN. Large double pink blossoms borne in profusion. Tree vigorous and upright in growth.

MT. FUGI. The very best white flowering cherry. We have never seen such clusters of snow-white double blossoms as this tree bears in the spring. Trees upright in growth but droops naturally when in bloom.

Prices Upright Tree Form, Double Flowering Cherry (bloom-size trees) 4 to 5 ft., \$5.95 each.

Weeping Double Flowering Cherry

Flowers are large double brilliant pink, borne in clusters with stems about 1 inch long. Blossoms later than the Single Flowering type and about the same time as other double flowering cherry, being partly in leaf when blooms appear. A grand sight to behold when in full bloom. Well developed heads on 5 to 6-ft. stems, \$9.95 each.

FLOWERING DOGWOOD

"CHEROKEE CHIEF" DOGWOOD

Red Flowering

A new fully red, budsport of famous pink dogwood that has been fully tested and widely grown with success. They are beautiful as specimen plants and in group plantings.

2 to 3 ft., bare root: \$4.95 each
3 to 4 ft., bare root: \$6.95 each

"CHEROKEE PRINCESS" DOGWOOD

White Flowering

A new completely white dogwood which has the fine characteristics of regular *Cornus florida*. Blossoms are larger and more prolific. A very dependable variety.

2 to 3 ft., bare root: \$3.75
3 to 4 ft., bare root: \$5.95

WHITE DOGWOOD

(*Cornus florida*)

The white dogwood is one of nature's prettiest plants. The flowers appear early and persist until leaves are formed. Foliage is green through the summer, turning red in fall. Scarlet fruits are abundant and beautiful from late summer until frost. Mixed plantings of white and pink dogwoods are very effective.

Prices listed are for thrifty, bare root plants:

	Each	3	10
2 to 3 ft.	\$2.75	\$ 7.50	\$22.50
3 to 4 ft.	3.50	9.75	30.00
4 to 5 ft.	4.50	12.75	40.00

The Beautiful Magnolias

MAGNOLIA SOULANGEANA, the best known of the deciduous Magnolias. Perfectly hardy and very beautiful plants when in bloom. Blossoms are large purplish-pink and usually appear just before the leaves come out. 18 to 24 inch, \$2.95 each; 24 to 30 inch, \$3.95 each; 30 to 36 inch, \$4.95 each; 3 to 4 ft., \$5.95 each.

MAGNOLIA STELLATA (The Starry Magnolia).

A distinct and charming slow growing magnolia. Blossoms before foliage appears. Flowers pure white, semi-double and fragrant. A profuse bloomer and very attractive.

2 to 3-ft. plants, \$3.95 each; 18 to 24 in., \$2.85 each

MAGNOLIA GRANDIFLORA.

The great evergreen, large flowering Magnolia of the South and Central areas. The most beautiful of all evergreen trees; its immense saucer-like, white shading to cream and very fragrant flowers present a striking appearance contrasted with the large glossy green leaves. Not hardy north of southern New York. 18 to 24 inch, \$4.50 each; 2 to 3 ft., \$5.95 each; 3 to 4 ft., \$6.95 each.

RUBY RED Flowering Plum

Large, beautiful pale pink flowers usher in exquisitely handsome red foliage that holds its color well through the growing season. Large, luscious fruit that is suitable for eating and canning is an added dividend from this marvelous tree. Trees are hardy, vigorous and need no pollination. They bear early and heavily. No home garden or yard can afford to be without this sensational new horticultural "find." Order yours now at this introductory price. **Large, Vigorous Branched trees, 4 ft. up: \$6.95 each.**

FLOWERING PEACH

Beautiful Flowers—Big Luscious Fruit

SATURN

Plant Patent 1485

(Grown and Sold Under License from Patent Owner)

Blooms showy masses of big double pink flowers—as showy as any regular flowering peach. Spring blossoms are followed by a crop of yellow fleshed, freestone peaches ripening about with Halehaven. Flavor is extra fine. A good dual-purpose variety.

DOUBLE DELIGHT

Plant Patent 1787

(Grown and Sold Under License from Patent Owner)

A perfect companion for Saturn. It blooms later and ripens earlier. Blooms are a beautiful shell pink, lighter and more delicately colored than Saturn. Fruit is equally as large, yellow, freestone and somewhat sweeter than Saturn.

Prices for Saturn and Double Delight Trees Only

Stocky, well-grown 1 year trees, 3 ft. up, \$3.50 each

Write for prices on larger quantities

MAGNOLIA SOULANGEANA

FLOWERING CRAB

SELECT FROM THESE OUTSTANDING VARIETIES

THE BEAUTIFUL HOPA CRAB

Exquisite rosy pink blossoms cover the entire tree—no other tree can equal the profusion of bloom of the wonderful HOPA. A beautiful tree from bloom to frost with red-tinged, dark green leaves and small red, rosy apples that cover the tree. Fruits can be used for jelly if desired. Tree spreads to about 15 ft.; 3 to 4 ft. and 2 to 3-ft. trees only.

ALMEY

THE SENSATIONAL NEW CRAB

Fiery Blossoms in the Spring . . . Bright Red Fruit in Fall

The tree is upright, vigorous and hardy. Blooms second year. Flowers open from deep carmine buds, are large, star pointed and fiery crimson. One of the best new sorts.

BECHTEL'S DOUBLE FLOWERING CRAB

One of the most beautiful of the flowering crabs; tree medium size, covered in early spring with large, double, fragrant flowers of a delicate pink color.

PRICES FOR ALL FLOWERING CRAB

	Each	3	10
5 to 6 ft.	\$4.75	\$13.50	\$40.00
4 to 5 ft.	3.75	10.50	30.00

SHADE TREES

Norway Maple

Best Medium Tree For Lawns

A large, handsome tree with broad, deep green foliage; has a very compact growth. A valuable tree for parks, lawns or streets. 6 to 8 feet, \$7.50 each; 8 to 10 feet, \$9.50 each.

Silver Leaf or Soft Maple

Very Fast Grower

(A. *Dasyarpum*.) A rapid growing tree of large size; irregular rounded form; foliage bright green above and silver beneath; a favorite street and park tree. 6 to 8 feet, \$5.50 each; 8 to 10 feet, \$6.50 each.

European White Birch

Unequaled For Beauty—Offered in Clumps or Single Stems

WHITE BIRCH CLUMPS (European). Same as regular White Birch except grown in clumps of 3 or more stems from a main stem at ground level. Produces very beautiful effect and very desirable for screen planting. 3 to 4 ft., 3 or more stems. \$3.95 each; 4 to 5 ft., 3 or more stems, \$4.95 each.

BIRCH WHITE (European). Erect growing branches slightly drooping and attractive bark which is almost white. 4 to 6 ft., \$2.95 each; 6 to 8 ft., \$4.75 each; 8 to 10 ft., \$5.75 each.

CUTLEAF WEEPING BIRCH. A slender tree with white bark, gracefully drooping branches, fern cut leaves which are dark green. One of the most beautiful weeping trees known. 6 to 8-ft. specimen trees, \$5.95 each.

Lombardy Poplar

Fine For Screen and Seashore Use

Grows to an immense height. Used for roadside planting or to break the monotony of low, round-top trees. Also beautiful as a screen or windbreak. 6 to 8 ft., \$2.75 each.

Broadleaf Evergreens

PYRACANTHA C. LALANDI (Firethorn). The most hardy of all Firethorns. It is an upright grower with white flowers in summer and large highly colored, orange berries from late summer to late winter. Firethorns should be pruned annually for increased berry production. They thrive on any well drained fertile soil.

12 to 18 inch, \$1.95; 18 to 24 inch, \$3.50
2 to 3 feet, \$4.75; 3 to 4 feet, \$6.25

RED BERRIED PYRACANTHA. There are many types of the red berried pyracantha being offered and we have selected the most hardy type we have observed. However, they will not stand zero temperatures. The red berried type is more spreading than the Lalandi. The clusters of bright, large, red berries contrasted with glossy, evergreen foliage surely presents a striking appearance. A beautiful sight when planted alone and in combination with other pyracanthas or other shrubs.

12 to 18 inch, \$1.95; 18 to 24 inch, \$3.50; 2 to 3 ft., \$4.75

Crimson King Maple

Plant Patent No. 735

BEAUTIFUL COLOR—VIGOROUS GROWTH

This is the real red maple you have been waiting for. It is a beautiful form of the Schwedler Maple with intense red foliage throughout the growing season. Unlike other red maples, the color of the Crimson King does not fade as the summer progresses. This fine tree originated in Europe and has been under observation in this country for many years. We know it is adapted to our soils and climates, that it is perfectly hardy, and that it can be grown in most any location. Crimson King is truly a "TREE OF BEAUTY." See color illustration on third cover. 4 to 5 ft., \$4.95 each; 5 to 6 ft., \$5.95 each; 6 to 7 ft., \$6.95 each.

Elms

CHINESE ELM—Tree upright, extreme ends of branches drooping, very dense, making good shade. Fast growing and resistant to disease, drought and cold. 5 to 6 ft., \$3.75 each; 6 to 8 ft., \$5.50 each; 8 to 10 ft., \$6.50 each.

HYBRID BROADLEAF ELM—A proven grower of the Elm family that is very vigorous. Leaves are much broader than Chinese Elm and trees are much cleaner. A very disease resistant and fine new plant. 6 to 8 ft., \$6.50 each; 8 to 10 ft., \$7.50 each.

Willows

WISCONSIN WEEPING WILLOW—The well-known green weeping willow. It makes a large tree covered with heavily drooping branches. 6 to 8-ft., branched trees, \$5.50 each.

NIobe WEEPING WILLOW—The famous Yellow-barked willow that has large drooping branches covered with narrow, silvery green leaves. Very attractive. 6 to 8-ft. trees, \$5.50 each.

NANDINA DOMESTICA (Heavenly Bamboo). One of our finest Berried Evergreen plants. A very showy shrub of medium height with large cluster of small red berries in the autumn. Its dark green foliage assumes a gorgeous orange-red or crimson color in winter. Thrives well in any well-drained loamy soil and is very hardy. One of the plants which is used in all the better class of landscape work.

18 to 24 inch, \$3.50; 12 to 18 inch, \$2.50

ABELIA GRANDIFLORA

(Bush *Arbutus*)

Foliage dark green, glossy, its arching branches have a distinct shade of red. From May until frost this plant is covered with pinkish-white, bell-shaped flowers.

12 to 18 inch, \$1.25 each; \$11.00 for 10
18 to 24 inch, \$1.95 each; \$17.50 for 10
2 to 3 feet, \$2.50 each; \$22.50 for 10

EXOTIC GARDEN HOLLIES

FEMALE CHINESE HOLLY

(*I. cornuta femina*)

A Chinese holly which bears large berries and has excellent foliage. Leaves are larger and more spiny than Burford. Plants tend to spread more than Burford and seem more hardy. Excellent for specimen and foundation planting.

BURFORD HOLLY

(*I. cornuta burfordi*)

A Chinese holly of extreme merit. Large red berries, very glossy green foliage. Generally has only one spine on each leaf. A very fine variety for foundation, specimen, or hedge planting.

DWARF BURFORD HOLLY

This new selection has the same fine berry and leaf characteristics as regular Burford. In size, it is a definite dwarf growing only to about 3 ft. Dwf. Burford is a rather slow and compact grower making it most adaptable to many confined locations. Hardy.

NELLIE STEVENS

A fine, vigorous variety that is hardy. Leaves are more glossy than on English kinds and more spiny than Chinese kinds. An excellent type for use as a specimen. Berries are brilliant red and come at an early age.

Extra heavy plants in 1 gal. cans: \$3.50 each; 2 for \$6.50; 4 for \$11.95.

DWARF JAPANESE HOLLY

(*I. crenata helleri*)

This very compact, low growing form is known everywhere as Helleri. It has very small leaves, no fruit, and is very useful for window boxes, planters, foundation planting, and rock gardens.

HETZ JAPANESE HOLLY

(*I. crenata hetzi*)

Very similar to Ilex Convexa, but having larger leaves, much greener foliage, and somewhat larger mature size. A most handsome and hardy plant that produces black berries.

VARIEGATED ENGLISH HOLLY

(Female)

A very showy and beautiful holly that produces red berries. Foliage is a glossy green with cream colored margins. Hardy wherever other English Holly is grown.

ENGLISH HOLLY

(Male)

This is the same as the female plant in appearance, but does not produce any berries. Male plants must be included in English Holly plantings as the rate of 1 to 10 for good fruiting.

FEMALE CHINESE HOLLY

\$3.60	\$5.20	\$8.25	\$14.25	\$24.75	\$95.00

EBONY KING

The sensational new, heavy-bearing blackberry that is proving superior because of its ability to bear consistent heavy crops. Also contributing to the popularity of this fine variety is the fact that non-bearing plants are easily distinguished and may be removed from the planting when necessary. Berries are large, glossy black, with very high dessert quality. Fruit is suitable for processing, home use, and for fresh fruit markets. Fruit ripens early. Plants are thrifty and hardy.

NOTE: Often Blackberry plants bloom prolifically but produce small, misshapen fruit. Generally, the tarnish plant bug is responsible. You may control it by using DDT, BHC, Parathion spray or dust, beginning just before bloom and continuing as close to harvest as the safe tolerances for the chemicals will allow.

When in need of larger quantities of any of the items listed on this page, write for special prices. Informative "Bountiful Ridge Cultural Directions" are also available on request.

BAILEY

A New York State introduction which is promising. Plants are vigorous, productive and hardy. The berries are somewhat larger than Eldorado, moderately firm, without core, sub-acid, and of good quality. Ripens in early August, about one week later than Hedrick.

HEDRICK

Introduced by the New York State Fruit Testing Cooperative as a promising new blackberry warranting extensive trial for home and market use. Plants are vigorous, productive and hardy. The berries are large, medium firm, with no core. The flavor is sub-acid. Ripens in late July.

BOYSENBERRY

A giant of the blackberry type. More flavorful than the blackberry and can be picked over a longer period of time. Yields are extremely high. The plant is a vigorous grower and should not be planted closer than 6 feet apart. It seems to do much better when trained on wires similar to grapes. Plants are especially resistant to disease and drought. Try them this year.

THORNLESS BOYSENBERRY

Has the same characteristics as the boysenberry except for the fact that the vines are THORNLESS. Can be easily handled at all times without gloves.

LAVACA BERRY

A seedling of the boysenberry, resembling its parent most but having higher production, larger berries, and more resistance to cold and disease. The berries are firmer, less acid, and of higher general quality. It is superior for freezing. We feel it to be a handsome addition to your small fruits planting.

DEWBERRIES

LUCRETIA Perfectly hardy and remarkably productive; said to be the best of this class of fruit. Ripens early. Often 1½ inches long by 1 inch in diameter; sweet luscious and melting.

GARDEN GRAPES

DELAWARE One of the highest quality grapes in cultivation. Extremely hardy. Adapts readily to various conditions. Matures its crop early. Has very attractive appearance. Keeps and ships well and is immune to black rot. Clusters are well shouldered, compact, light red.

CONCORD The standard by which all other black grapes are judged. No vineyard is complete without a liberal planting of Concord. Our Concord vines are well rooted and are guaranteed to give perfect satisfaction, producing huge quantities of deep purple grapes of fine flavor.

CATAWBA Bunches medium size, shouldered. Grapes large, deep coppery red, juicy, sweet, rich.

CACO (RED) Is of the highest quality, being so rich in sugar and excellent flavor it can be eaten two weeks before it is ripe. The grapes are very large; bunch good size, compact and good form. The vines are strong growers, hardy and prolific. Ripens one week before Concord.

FREDONIA The earliest good black grape. The vine is vigorous, hardy and productive and ripens its fruits two weeks earlier than Concord. The clusters are medium size and compact. Berries are large and round; the skin is thick and tough. The flesh is juicy, solid but tender and very good quality.

SHERIDAN A late keeper to extend the Concord season. Under similar conditions the plants are just as hardy, vigorous, healthy and more productive than Concord. The bunches are large and compact; berries are large and very firm. The flavor is sweeter and richer than Concord. Ripens week later than Concord.

PORTLAND Holds first place among grapes as an early green variety. Vine very vigorous, hardy and healthy. Bunches and berries larger than any other green grape. Very fine quality.

NIAGARA Occupies same position among the white varieties as Concord among the black. Bunch and berries are large, greenish white changing to pale yellow when fully ripe. Skin thin but tough; quality much like Concord.

GOLDEN MUSCAT Possesses the rich golden color of Diamond and the fine muscat aroma of the European Muscat. For home use or roadside market it is one of the best. Vine vigorous and productive. Clusters large, berries handiest and best flavored grapes grown in eastern America. Ripens after Concord.

INTERLAKEN SEEDLESS A very hardy California seedless type grape you can grow in your own garden. Hardy to 15 degrees below zero. Interlaken produces loads of amber-colored, crisp, juicy and delicious fruit. It ripens early and brings added flavor to summer salads and fruit dishes. For flavor, quality, and "lip-smackin' good eatin'", plant Interlaken this spring.

Dear Sirs:

Just wanted to write and tell you how much I am pleased with the grape vines I received last fall. They are very fine vines and I didn't lose a single one. You all are to be commended for your fine plants.

—GLEN F. CARTER, South Carolina

MUSCADINE GRAPES

These fine grapes grow vigorously and produce heavy crops from Delaware to Texas. Dearing and Magoon are self-fruitful and are needed to pollinate Hunt, Higgins, and Scuppernong. One vine will pollinate nine others.

HIGGINS Clusters large, pink to reddish bronze; skin thick, edible. Fruit very large; quality good; production very heavy. Ripens midseason to late. This is the largest of all muscadines and a valuable addition to any vineyard. Needs pollination.

SCUPPERNONG Clusters medium size, bronze; fruit medium to large; skin medium to thin; quality excellent. Ripens early. It has a sweet fox flavor that is agreeably tart. The most popular muscadine variety. Needs pollination.

HUNT Clusters large; fruit medium to large. Skin medium to thin, black; excellent quality. Ripens early midseason. Hunt is the best all-purpose black muscadine. It is excellent for wine, fermented juice, jelly, jams, and all other commercial purpose. Needs pollination.

DEARING Perfect-flowered. Bronze clusters of medium size; skin thin; fruit medium to small. Excellent quality; production heavy. Ripens midseason. The best bronze perfect-flowered muscadine. Self-fruitful and will pollinate Higgins, Hunt, and Scuppernong.

MAGOON Perfect-flowered. Reddish black clusters, medium to large; fruit medium to small. Excellent quality; heavy production. Ripens midseason. The best black perfect-flowered muscadine. Self-fruitful and will pollinate Higgins, Hunt, and Scuppernong.

HOME GARDEN SPECIAL GRAPE VINES

Five 2-yr. No. 1 Sturdy Vines

ONLY \$3.95

1 CONCORD (blue)	1 DELAWARE (red)
1 SHERIDAN (blue)	1 NIAGARA (white)
1 FREDONIA (black)	

BLACK HAWK (Black)

Black Hawk originated in Ames, Iowa. It is a very large, nearly round, non-crumbling, firm berry. Black Hawk stands up well under commercial handling and the quality is excellent whether used fresh, frozen, or in jams, pies, or sauces. Flavor is sweet to mildly acid. Its picking season lasts from 10 to 14 days. The bush is vigorous, very hardy, and highly productive.

NEW LOGAN (Black)

One of New Logan's outstanding characteristics is its resistance to mosaic and other raspberry diseases. The berry ripens one week earlier than Cumberland. It is a heavier yielder and the glossy black berries are as large. It holds up well through drought. The last picking is as fresh and free from seediness as the first.

A thrifty grower, and although not as upright as Cumberland, our growers find this no objection if the summer shoots are topped higher than normal.

BRISTOL (Black)

Bristol is one of the best black raspberries being grown. It ripens just a few days before Cumberland. The berries are large and firm, fairly glossy and very attractive. Quality is one of the best. The bushes are very hardy and vigorous. Bristol rates as one of the heaviest bearing black-caps now known. From observation and reports coming to us, we can recommend it highly to planters for either commercial markets or home use.

New for Spring 1966

EARLY CUMBERLAND (Black)

(Ott's Strain)

Just the Berry to precede Cumberland; this fine new variety ripens five to ten days earlier than Cumberland. It produces heavy crops on vigorous canes. Yields are better than Bristol; berries carry as well as Cumberland. Early Cumberland berries are large, jet black, very firm and have a delicious, sweet flavor. We think Early Cumberland has a place in every black raspberry planting.

RASPB

All Red and Everbearing Raspberries are heavy rooted No. 1 Sucker plants.

We have a fine supply of thrifty, well rooted plants for our customers. Let us quote you if you want larger quantities. Free Cultural Directions sent upon request.

CUMBERLAND (Black)

Cumberland stands as America's leading black raspberry. It is the choice of commercial growers in central and northern regions. One of the largest of the black-caps. Plants are healthy, vigorous growers, throwing up stout, well-branched canes that produce immense crops of magnificent berries. The fruit is large and holds up well during the picking season. Very firm, and rated as one of the most delicious of black raspberries.

NEW MORRISON (Black)

Berries are extremely large, many measuring over 3/4 inch in diameter, and they do not crumble. A little later than Cumberland. Has fine dark glossy color and berries hold up well after picking, having exceptionally good quality. A worthy variety for planting anywhere.

Be Assured of Quality

Our raspberry plants are dug early while dormant. They are put in our refrigerated storage where they are kept with proper moisture at about 34 degrees F. Our years of handling raspberry plants and our modern storage enable us to offer our customers PLANTS WHICH WE KNOW WILL GIVE SATISFACTION IN EVERY WAY.

New Amber Raspberry

DELICIOUS — NOVEL

Amber is an outstanding new raspberry for the novelty market and home gardener. Introduced by the N. Y. Experiment Station, it is amber in color, sweet flavored, of good quality, and does not crumble. Berries are large. Amber ripens late and extends the season for home-grown raspberries.

BERRIES

OUNTIFUL RIDGE PLANTS

LATHAM (Red)

The popular mosaic-free, hardy raspberry. Without question Latham is the most profitable red raspberry for commercial planting. It is absolutely hardy. It cannot be surpassed in productiveness. Due to its rich brilliant red color it sells readily on market stands, is a delightful table berry and almost perfect for canning. The berries are large, round and unusually firm, exceptionally well suited for shipping to distant markets. It ripens evenly over a long season.

TAYLOR (Red)

This beautiful berry should have the consideration of every commercial raspberry grower.

The plants are vigorous, hardy, productive, tall growing and make new plants rapidly. Sturdy canes hold the berries well off the ground. Berries ripen shortly before Latham, are large, long conic, bright attractive red, thick fleshed, very firm, sub-acid and of excellent quality, being superior to Latham. The berries do not cling to the bush and carry well to markets.

MILTON (Red)

Milton ripens two or three days later than Latham and is a fine berry for home or market use. The berries are large, brilliant red, non-crumbling, mild sub-acid in flavor and good. The plants are vigorous, productive, hardy, and have remained free of mosaic.

SUNRISE (Red)

This berry ripens 10 to 16 days earlier than Latham. Its size is near the size of Latham.

It has been very resistant to anthracnose, leaf spot, cane blight, and the resistance shown is probably one of the important factors in its ability to withstand low temperatures.

The color is bright red but turns dark red on ripening. The berries pick easily. They are firm, fine textured, juicy, non-crumbling, sub-acid in flavor with good raspberry aroma, and better in quality than Latham.

INDIAN SUMMER

EVERBEARING RED

The quality is good and the season very early, starting a day or two later than June varieties. The fall crop commences in mid-September, continuing until stopped by hard freezes in November. The bulk of the crop is borne in October. Plants are above medium to tall, vigorous, upright, hardy, healthy, productive. Fruit is large and uniform, maintaining size throughout the season. Roundish conic in shape, cavity of medium size, smooth light bloom, color medium red. Juicy, tender, mild sub-acid, good.

SEPTEMBER

EVERBEARING RED

The plants are vigorous and disease resistant. The berries are shaped similar to Latham, bright red, firm, not crumbling. Ripens its fall crop two to four weeks earlier than Indian Summer and continues until frost. The spring crop ripens early and plants are very productive.

Introducing for Spring 1966

OTT'S PENNRIDGE (Red)

We are pleased to introduce to our customers one of the finest new red raspberries we have ever seen. Ott's Pennridge originated in Bucks County, Pa., on the farm of Mr. H. Lloyd Ott. He was first attracted to this new berry when he noticed a few plants of outstanding vigor and berry size among his Latham. He propagated from these original plants, and after several years of selection and testing, he asked us to see the fine results of his work. We found this new berry most exceptional.

OTT'S PENNRIDGE is a large, healthy, vigorous grower that averages one to two feet taller than Latham. The berries are about 50% larger than Latham, and ripen some 10 days later. Test trials indicate that these large, heavily loaded plants out-yield most other red raspberries two to one. OTT'S PENNRIDGE berries have excellent flavor and carry as well as the best of the leading red raspberries.

BLUEB

THE ARISTOCRAT OF

A Treat to the Nation — They Can Be Grown
Plant This Large Size, Fine Flavored,
Makes The Plant

RECENT INTRODUCTIONS

EARLIBLUE Fruit clusters of medium size; berries oblate, light blue, very firm, sub-acid. Flavor very good Earliblue ripens early, with Weymouth and June. Bushes are upright, very vigorous, well shaped and good producers.

BLUERAY The fruit is large, with a medium light blue color, medium scar, fine flavor, and resists cracking. It matures with Ivanhoe and Rancocas and most nearly resembles Dixi. The bush is hardy and very productive.

IVANHOE Fruits are large, attractive, slightly later than Stanley, with a good blue color. Flavor is good. Plants are vigorous, productive, and more tolerant of canker than Stanley.

BLUECROP Fruit clusters of Bluecrop are large. Berries are roundish oblate, very light blue, very firm. Sub-acid; flavor good, Bluecrop ripens in midseason with Concord, Pioneer and Atlantic. Bush upright and vigorous; very consistent producer.

BERKELEY Fruit is light blue. Considered one of the largest blueberries yet introduced. Berries are not subject to crack, ripen about a week after Stanley. Plants are very productive.

HERBERT Fruit clusters are loose; fruit ripens about the same time as Jersey and Dixi, earlier than Coville but later than Berkeley. Berries of Herbert are large and carry their size well through ripening season. Firm, resistant to cracking; color about the same as Jersey, Rubel and Dixi. Flavor is equal to the best varieties. Fruit hangs well on bush. Bushes flower late, are thrifty growers and consistently productive.

NOTE: Be sure to buy your blueberry plants by graded height and age rather than by age alone. The plants we offer are of bearing age.

We suggest from eight to twelve plants for a family of five people. Ask for and follow our free cultural directions. Plant our blueberries this year for pleasure and profit.

Varieties listed in order of ripening

WEYMOUTH Earliest of all. Ripens berries quickly for early markets. Fruit is above medium in size and usually of fair dessert quality. Bush erect, open, spreading, of average vigor.

JUNE This variety has proved to be a fine producer, bringing high prices. It ripens a little before Cabot and continues through Cabot season. The bush is medium high, with small leaves, making it very attractive in appearance. The fruit is firm and of good quality.

STANLEY A recent development recognized in New Jersey blueberry sections as one of the outstanding blueberries. Vigorous plants, large berries, very productive.

RANCOCAS The bush of slender, vigorous, upright habit rarely surpasses 6 feet in height. Winter twigs are a dark red. The berries are somewhat larger than those of Rubel and begin to ripen several days earlier.

BERRIES

THE BUSH BERRY FAMILY!

Most All Sections of The Country.
Wonder Berry. Beauty of Leaf and Wood
Very Ornamental

CONCORD The bush is upright and at maturity exceeds 6 feet in height. Young growth is bright red in winter. The berries are large, frequently reaching $\frac{3}{4}$ inch in diameter. They usually ripen a few days earlier than Rubel and are fine in flavor and appearance.

ATLANTIC Late midseason. A cross between Jersey and Pioneer which has two outstanding traits—one being its superior size and non-cracking during wet weather, the other is its handsome color and fine flavor. A heavy producer fruiting about with Rubel but much larger in size, better in quality and flavor. Requires less time to prune than Rubel.

PEMBERTON One of the newer varieties, outstanding for its vigorous growth and heavy production of large to very large fruits. Berries are firm, having slight aroma and fine dessert quality. Ripens midseason.

RUBEL Well-developed bushes stand 6 feet or more high, vigorous and beautiful. Stems are slender but sturdy. The winter color of the young wood is a rich red. The large berries are of a fine blue color. Planted extensively for commercial fruit production.

JERSEY The bush is vigorous and large. The winter color of the young growth is a light red over a gold-brown. Berries are the largest of any here listed, of a very light color, and ripen at the same time as Rubel.

DIXI Bush vigorous, open, spreading, productive. Berry very large, fair blue color, firm, good dessert quality. Late midseason.

BURLINGTON The picking quality of Burlington is superior because of complete separation of berry from stem. It ripens later than Jersey or Rubel. Fruit is above average dessert quality. The bush is erect, vigorous and healthy. Berries are a good blue color, medium to large, and hold up in size to the end of the season.

COVILLE Selected to give larger berries of good quality and color. Ripening after Dixi, Rubel and Jersey, Coville is rated as our latest blueberry. Large, good blue color, good quality. Hangs well to clusters even when ripe, thereby requiring less picking. Thrifty plants.

ASPARAGUS

THE GROWER'S FAVORITE

ROBERT'S STRAIN MARY WASHINGTON

Developed by selection from the original Mary Washington. It is a new type possessing very large spears, giving heavy yields, and having exceptional vigor. The most RUST-RESISTANT strain offered to the planter today. ROBERT'S STRAIN is being accepted by the large commercial planters of the East almost exclusively for their new plantings.

MARY WASHINGTON

The old stand-by of asparagus planters. A strong grower with large stock, attractive green color and rich, tender spears. Also RUST-RESISTANT and recommended for planting in most all localities. Bears early and gives heavy yields.

RHUBARB

MacDONALD RED

This is one of the best RED RHUBARBS now offered. It is suitable for field growing or forcing. The plants are healthy, strong growers, producing long, deep red to pink ribs of very fine flavor.

VALENTINE

The newest and best of all red rhubarb. Stalks are very sweet, with a pleasingly tart after-taste. This is a vigorous, tender and smooth new variety with even, bright red color all through the stalk. Valentine is excellent for home use, makes wonderfully delicious pies and bright red sauce. Try Valentine and use less sugar than you ever dreamed possible. It's the best.

CHIPMAN'S CANADA RED

This splendid type rhubarb is a favorite of the red types. It is unique in that the entire rib is a pleasing cherry-red all the way through, having a pleasing rhubarb taste when prepared for serving. The ribs are not quite as large as some other varieties, but its color and flavor sell it readily.

Everbearing Strawberries

STREAMLINER

A beautiful everbearing variety with fine quality, rich color, and real strawberry flavor. Adapted to most central and eastern growing conditions. Plants are vigorous, produce good spring crops, and bear almost constantly during late summer and fall. Berries are medium to large. Plant big thrifty plants in the spring and harvest large, beautiful fruits in the fall.

SUPERFECTION

It's beautiful . . . it's heavy bearing . . . it's "good eatin'". Superfection leads the field of everbearing varieties. Harvest large, red, mouth-watering fruits just 90 days after planting. The plants are vigorous, adapt themselves to a wide range of soils and weather conditions, and produce more heavily in the fall than any other everbearing kind we know. Superfection is best for garden, commercial or local market.

STRAWBERRY PRICES PAGE 46

Free cultural directions sent on request

← OZARK BEAUTY

A new everbearing kind that produces large volumes of big, juicy, conical fruits. Flavor is excellent. Plants are vigorous and productive. Ozark Beauty is extra good for freezing. Pick large, luscious berries all season long from this fine variety. Yields have exceeded 12,000 quarts per acre in test plots. Try them.

✓ GEM

Gem is an old everbearing kind that has been the favorite of growers throughout the northeast for years. More vigorous, virus-free stocks have made it indistinguishable from Superfection and Brilliant. Whether you order Gem or Superfection, you may be assured of receiving the finest everbearing for eastern areas.

NOTICE

You will always get a separate order acknowledgement for any strawberry plants you order, and your strawberry plants will be shipped independent of other stock ordered in all cases. Our strawberry plants will be shipped according to your directions as nearly as possible, so when sending your order please state definitely when you wish your plants shipped.

REGISTERED (ESSENTIALLY VIRUS FREE) STRAWBERRY PLANTS

All strawberry plants from Bountiful Ridge bearing the label "Registered Essentially Virus Free" have been grown from Virus Free Foundation Stocks indexed by the U.S.D.A. in Beltsville, Md. They have been dusted 12 to 14 times with Parathion to control the vector of the virus diseases, fumigated twice with Nemagon for the control of nematodes, grown in well isolated areas away from fields of ordinary plants and nursery fields of varieties not yet available from virus free stock.

All of our plants have been abundantly fed with special fertilizer containing a minor element mix. Chlordane has also been added for the control of cutworms, ants and grubs which tend to make the plants less thrifty if allowed to go unchecked. Periodical checks have been made of planting stocks and nursery fields by competent inspectors to be sure that these plants are free of the dangerous red stele root rot and other injurious diseases. The plants listed in this catalog as Registered (Essentially Virus Free) have been grown according to these specifications as prescribed by the Horticultural Department of the University of Maryland.

Buy and Plant Bountiful Ridge Strawberry Plants for Greater Success and Profits

SHIPPING SEASON—We ship from November 15th to June 1st. Earlier orders cannot be accepted because plants will not be sufficiently dormant nor rooted until November 15th. All orders filled after June 1st will be at the purchaser's risk. We will make every effort to see that they arrive in good condition.

PRICES—All prices listed are F.O.B. Princess Anne, Md., and apply only to varieties listed. *Several varieties cannot be combined to obtain a quantity rate!* Please write for special quotation when in need of more than 5,000 of one variety.

POSTAGE—Please see special instructions on order blank.

VIRUS FREE PLANTS—All varieties except Dixieland are Registered—Essentially Virus Free Plants. Virus Free Bundle Tag #12.

OUR STATE INSPECTORS ISSUE SPECIAL STRAWBERRY PLANT CERTIFICATE

With existing plant diseases you cannot afford to take chances.

UNIVERSITY OF MARYLAND
STATE HORTICULTURAL DEPARTMENT
College Park, Md.
CERTIFICATE OF INSPECTION OF STRAWBERRY PLANTS
Duplicate of Number 2

March 1, 1965

This is to Certify, that the STRAWBERRY PLANTS OF THE BOUNTIFUL RIDGE NURSERIES, Princess Anne, Md., have been inspected in accordance with the laws of Maryland, 1898, Chapter 289, Section 38, and the Rules and Regulations promulgated by the State Horticulture Department, 1939, governing the inspection, certification and transportation of Strawberry plants within the State, that said plants are apparently free so far as can be determined by inspection, from the RED STELE ROOT ROT and other dangerously injurious plant diseases and insect pests.

This Certificate is valid until September 30, 1965, unless sooner revoked.
GEO. S. LANKFORD, Chief Inspector

L. O. WEAVER, State Pathologist

✓ **EARLIDAWN** ➔**EARLINESS—FREEZING QUALITY—HIGH YIELDS**

Ripening five days before Blakemore and Premier, EARLIDAWN is the earliest of all the good, commercial strawberry varieties. Year after year it has come through with early, large crops of nice market berries.

The berries are quite firm, with a tough skin. Color is a vivid red only slightly darker than Blakemore, which does not become too much darker upon holding. Crops of EARLIDAWN have been outstanding in all areas, with as much as 58% of the crop being harvested in the first week on this fine new variety.

EARLIDAWN makes extra large crowned plants but not too many runner plants. Yet, production is still quite high for such an early berry.

✓ **JERSEYBELLE** ➔**Virus Free Vigor and Rich Market Quality**

Jerseybelle has brought the highest prices paid for strawberries anywhere since its introduction a few years ago. Jerseybelle has risen to prominence as a highly profitable late midseason berry for growers of New Jersey and Long Island. The berries are bright orange-red, glossy and firm, turning slightly darker upon holding. Jerseybelle has been found best for moderately close and local markets.

Plants make good growth on rich, moist soils and give good picking beds of large, stocky crowns. However, they are not nearly as vigorous as Sparkle, Catskill or Pocahontas. We recommend Jerseybelle for trial in most eastern areas. It has not been found to be very adaptable to midwestern growing conditions where observed.

✓ **VESPER****(NJ 157)**

This fine new berry is the result of a cross of Utah Shippers and Jerseybelle which ripens later than or about with Jerseybelle. It has a long harvest period that extends well into the Redstar season. The fruits are large and pretty. Vesper is the most productive of the selections tested at New Brunswick. It is a good plant maker but is not resistant to red stele or verticillium wilt. It appears that Vesper will do well and should be tried in areas where Jerseybelle is successful.

✓ **MIDLAND****Beauty . . . Size . . . Productivity . . . The Flavor King**

Midland from Virus Free Stocks is one of the leaders of early strawberry varieties. Always a favorite as an early berry with outstanding size, beauty, productivity, quality, firmness and freezing ability, Midland can now be profitably grown, thanks to the increased vigor of Vigor Free Stocks. Midland will now make good beds of large vigorous plants.

Berries are early, ripening with Premier and Blakemore, and as productive as either, averaging somewhat larger in size. The flavor compares favorably with Fairfax, known generally as our highest quality berry. Freezing tests show Midland to be one of the best for either commercial or home use. We suggest you try this fine variety this year and see if you don't agree that it is most outstanding.

✓ **TENNESSEE BEAUTY**

Tennessee Beauty is being grown in nearly every eastern and midwestern berry section with the same results . . . **LARGE YIELDS AND HIGH PROFITS.** Berries of Tennessee Beauty are large (size holds well throughout entire season), firm, and outstanding shippers. They are a bright glossy red, holding well without changing color. Tennessee Beauties are of high quality and in demand for processing and freezing as well as for use on fresh markets. They ripen late midseason to late, and are sure croppers.

Plants are vigorous and free plant makers, always assuring good picking beds of large stocky crowns. Tennessee Beauty can be grown on a wide variety of soils with good results. We recommend it as a sure profit-maker in most all southern, eastern, northern, and midwestern producing areas.

✓ **ALBRITTON**

Albritton is the most beautiful strawberry known to us. Berries are large, attractive bright glossy red, and ripen about with Blakemore. Berries are firm, carry well, and are of good flavor. Plants are vigorous and productive. Albritton is best for southern areas but demands trial wherever a real "eye-poppin' berry" is desired.

✓ **BLAKEMORE**

Virus Free—No Yellows—Strong—Healthy

A very free plant maker and responds quickly to good treatment. It is an abundant bearer. The fruit averages large and retains its bright attractive red color even after being picked several days. It will ripen a few days earlier than Premier. Foliage is healthy and vigorous. The plants hold up well during a drought. The berries are firm and unexcelled for long-distance shipping. They are preferred by all strawberry processing companies.

✓ **STELEMASTER**

Resistant to Three Races of Red Stele

Stelemaster ripens about with Blakemore. Berries are medium to large and hold their size well throughout season. Generally uniform and smooth, medium red with a glossy surface. The flesh is light red, firm, juicy, and flavor is mild sub-acid. Stelemaster plants are vigorous, very productive and highly resistant to red stele in eastern United States. Leaves are resistant to scorch but do leaf spot under some conditions. It should have the consideration of every planter where red stele is a problem.

✓ **FAIRFAX** ➔

Queen of the Table Berries

Fairfax ripens about the same time as Premier, and its fruiting season extends over a long period. The quality Fairfax is equal to the best. Berries are large to very large, of a bright red color at picking time. Turns dark after being picked for several days but retains its flavor and firmness.

✓ **ROBINSON**

Large Size—Bright Color

A LEADING MARKET BERRY

Robinson, often called Scarlet Beauty, has those very large attractive berries which catch the customer's eye every time. They are a beautiful bright red color with glossy finish, holding well with little loss of color. Yields are comparable to other leading varieties.

Plants of the Robinson variety are very vigorous, almost always making good picking beds under extreme circumstances. Robinson actually does better in dry seasons than in wet ones because of the tendency to over-produce plants. The berries also hold up better under dry conditions.

✓ **PREMIER**

Premier can be considered almost frostproof. The berries average large and hold up well under heavy crops and unfavorable weather conditions. Ripens over a comparatively long period, from two to three weeks. Berries have an attractive bright red color and unusual quality and are moderately firm.

VIRUS FREE PREMIER plants are unusually vigorous and free plant makers. The foliage is lighter in color, the berries are lighter in color and possibly not as firm as the old type Premier but berries have Premier shape and quality.

✓ **ARMORE**

Very Large . . . Highly Productive

Vigorous Grower

This fine berry is being successfully grown all through the Midwest. Its large size and beauty have made it quite popular and profitable. In our fruiting plots it has shown up very well, giving very large, firm, and beautiful berries.

Armore is a late midseason kind of outstanding merit. Plants are vigorous and easily make good producing beds. Berries are light red and firmer than Premier and Sparkle. Quality is good.

✓ **SPARKLE**

**A Very Heavy Producer
GOOD FOR FREEZING, TOO**

Sparkle is a prolific plant maker with good healthy foliage, and very productive. Berries are medium size, uniform in shape and have a bright red color, turning somewhat dark on fruits that are over-ripe. The quality of the berry is excellent. Ripens midseason, being a little later than Premier. Requires good moisture for best results. Sparkle is grown extensively in New Jersey, eastern Pennsylvania, New York and New England States.

✓ **DIXIELAND**

Early . . . Vigorous Grower . . . Good Yields

Dixieland ripens with Blakemore, is slightly firmer than Blakemore and has large berries. They are a bright glossy red, only slightly darker than Blakemore, and uniform in shape. Flavor is tart and good. Yields have run over 9000 quarts per acre of good, large, firm berries.

A genetic variation (spring yellows, June yellows) has developed in the variety Dixieland. This is not a virus. Plants are weakened and yields are reduced. There are no known sources of Dixieland free of spring yellows. Attempts are being made to locate non-yellowing stock. Thus, we can make no guarantee as to performance of Dixieland.

Because of genetic variation, Dixieland has been taken out of the Virus Free program and cannot be sold as Registered Stock this season. As soon as Virus Free clones of this variety are available, we will offer them for sale.

✓ **CATSKILL** ➡

ONE OF THE VERY GOOD MIDSEASON BERRIES

A vigorous grower, somewhat frost resistant and extremely productive. It has proven itself for many years and is recognized as one of the best midseason berries in cultivation. The foliage is healthy in this latitude. It is a good plant maker and very productive. The berries are large and of good quality. We recommend Virus Free plants of this fine variety for this and more northern areas. Catskill is the Number One midseason variety for the Northeast.

✓ **REDGLOW**

**BEAUTY—PRODUCTIVITY—LARGE SIZE
RED STELE RESISTANCE**

Redglow is one of our best-looking strawberries. The fruit ripens in early midseason and is large, beautiful, brilliant red, and delicious. The berries hold their size throughout the season and are fairly firm. They are good for freezing and fresh market sales.

Plants of Redglow are vigorous, productive, and resistant to the common type of red stele. This is a real good variety for the middle states area and should be planted in rich, moist soil. It ripens one or two days later than Earldawn.

✓ **REDSTAR**

Our Very Best Late Berry

A sure bet to continue the good strawberry season. Its large, flavorful berries are certain to make a hit with your customers and family. They ripen a week to ten days after other berries are gone—so late that they are seldom hit by frost, and annual crops are a certainty. The first berries are very large and wedge shaped. Later ones are mostly conic. Flavor is delightfully good for such a late berry. The bright red color is quite attractive and darkens little on holding.

✓ **KARDINAL KING**

Kardinal King has created something of a sensation in Michigan by producing record-breaking crops which outsold all other varieties in competition. Buyers praise it for high shipping quality. Does equally well for canning and freezing.

The plants grow large, making wide fruiting rows. Berries ripen slightly after Premier and continue through the late season. The fruits are large, solid red, juicy and sweet.

✓ **EMPIRE**

Heavy Bearer—Frost Resistant

Empire is a medium early, outstanding berry for the middle and northern berry-producing areas. It is beautiful—larger than Premier, firmer, better carrier, more attractive and a higher yielder than Premier. Empire has always been a vigorous grower. Virus free stocks make it even easier to get good fruiting beds. The high yields of large, glossy red fruit are making this fine berry very popular in the Premier growing sections of the country. Why don't you try some from Bountiful Ridge this year?

Our Most Popular Varieties

SURECROP

MULTIPLE RESISTANCE TO RED STELE—FINE FLAVOR
VERY HEAVY PLANT PRODUCER

Excellent Size . . . Good Yields . . . High Prices

SURECROP is a really fine new strawberry variety wherever grown, from Pennsylvania and New York to southern Virginia and westward to Ohio.

SURECROP is a midseason berry ripening about with Fairland and Temple. The berries are a light, bright red which turns to a deep rich color. Seeds are a nice bright yellow set even with the surface. SURECROP berries are firm, with a tough glossy skin which makes them ideal for distant markets. They have also been recommended for freezing. Size holds well throughout the season, with the average being larger than Stelemaster.

A very vigorous plant maker and producer, rivaling such varieties as Pocahontas and Robinson as the best bed makers of all strawberry varieties. Coupled with STELEMASTER as a fine early berry, SURECROP as a midseason berry will deliver a MONEY-MAKING, RED STELE RESISTANCE PUNCH for growers everywhere.

MIDWAY

New . . . Widely Tested . . . Red Stele Resistant
Merits Trial in All Areas

Midway is a cross of Dixieland and Temple that has done well in test plots from Massachusetts to Virginia and westward. It should be tested as a virus free, red stele resistant replacement for Temple and Fairland, neither of which has virus free stock available.

Midway ripens in midseason, about with Temple. The berries are medium to large size, have a uniform deep red color with a glossy surface, firm skin and yellow seeds. The flesh is firm. Berries are irregular conic shape but have good dessert quality and have stood up well in the frozen pack.

Plants of Midway are vigorous, highly productive, and resistant to the common race of red stele. The leaves are somewhat susceptible to leaf scorch and leaf spot.

Growers report 1964 crops of Midway were excellent in yield, color, size. Buyers paid high prices for fruit because it carried long distances with a minimum of loss.

POCAHONTAS

The Three-Way Strawberry

FRESH MARKET . . . CANNED . . .
FROZEN PACK

Outstanding . . . Wonderful . . . My Best Money Maker . . . These are the words used by many of our customers to describe the way they feel about this great berry. Since its release by the U.S.D.A., Pocahontas has climbed to the top of the ladder as a commercial favorite. Time after time it has outyielded all other kinds from the Carolinas to New York and as far west as Ohio and Arkansas. Its extra high vigor gives Pocahontas good picking beds even under adverse conditions.

Yields of Pocahontas often are more than 10,000 quarts of large, beautiful, high quality berries. They have brought high profits on fresh markets everywhere. Pocahontas has been accepted by the processors as an outstanding berry for canning and freezing.

The berries are a bright, glossy red, firm, somewhat conic in shape, and not as tart as Blakemore. Pocahontas ripens about a week later than Blakemore.
